 Diabetic good control = 6.9%  
 Diabetic fair control = 7.0 - 7.9 %  
 Diabetic poor control = > = 8.0 %

**Comments:-**

Haemoglobin A1c (HbA1c) correlates with a time weighted average of plasma glucose values over the previous 3 to 10 weeks. The measurement of HbA1c is therefore a reflection of glucose control over a far longer period than a blood glucose value and it remains unaffected by the short term fluctuation in blood sugar levels.

**NOTE :**

1.TSH levels are subject to circadian variation, reaching peak levels between 2- 4 am and at a minimum between 6-10 pm.The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentration.

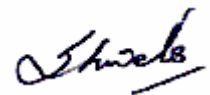

2.Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.

3.Physiological rise in Total T3/T4 levels is seen in pregnancy and in patients on steroid therapy.

clinical uses: Primary hypothyroidism, hyperthyroidism, inappropriate TSH secretion, nonthyroid illness, autoimmune thyroid disorders, pregnancy associated thyroid disorders, thyroid dysfunctions of infancy and childhood.
