Clinical Significance:

Alanine transaminase (ALT)

ALT is an enzyme found in the liver that helps your body metabolize protein. When the liver is damaged, ALT is released into the bloodstream and levels increase.

Aspartate transaminase (AST)

AST is an enzyme that helps metabolize alanine, an amino acid. Like ALT, AST is normally present in blood at low levels. An increase in AST levels may indicate liver damage or disease or muscle damage.

Alkaline phosphatase (ALP)

ALP is an enzyme in the liver, bile ducts and bone. Higher-than-normal levels of ALP may indicate liver damage or disease, such as a blocked bile duct, or certain bone diseases.

Albumin and total protein

Albumin is one of several proteins made in the liver. Your body needs these proteins to fight infections and to perform other functions. Lower-than-normal levels of albumin and total protein might indicate liver damage or disease.

Bilirubin

Bilirubin is a substance produced during the normal breakdown of red blood cells. Bilirubin passes through the liver and is excreted in stool. Elevated levels of bilirubin (jaundice) might indicate liver damage or disease or certain types of anemia.

HBA1c	5.91	%	Normal Range : <6% - Good Control : 6 - 7% - Fair Control : 7 - 8% - Unsatisfactory Control : 8-10% - Poor Control : >10% -
Estimated average plasma glucose	133.0	mg/dl	80 - 120

Interpretation: As per American Diabetes Association(ADA)

Non diabetic adults ≥ 18 years	<5.7
At risk (prediabetes)	5.7 - 6.4
Diagnosing Diabetes	≥ 6.5
Therapeutic goals for glycemic control	Good of Therapy > 19 years - <7.0 <19 years - <7.5

NOTE:

- HbA1c reflects long term fluctuations in the blood glucose concentration
- A diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

Significance of Test:

- HbA1c provides an index of average blood glucose levels over the past 8-12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

TFT

Thyroid Function Test (TFT)

Investigation	Observed Value	Unit	Biological Reference Interval
THYROID SERUM HORMONS			
Serum Triiodothyronine (T3)	1.65	ng/mL	0.89 - 1.87
Serum thyroxine (T4)	13.08	ug/dL	5.1 - 14.28
Thyroid Stimulating Hormone (TSH)	0.86	µIU/mL	0.66 - 5.67

Comments:-

- (i) Ethnicity, iodine intake, gender, age, body mass index and Exercise influences the reference range of Thyroid hormones and serum TSH concentrations.
- (ii) Changes in Thyroid Hormones (especially T3) and TSH may be seen as early as 24 hours after the onset of non-thyroid illness. (Poor nutrition/starvation, sepsis, burns, malignancy, myocardial infarction, post-surgery, and with chronic liver and renal disease)
- (iii) Serum total T4 and T3 concentrations increase to approximately 150% of non-pregnant values – this occurs during the first half of pregnancy and is maintained thereafter until parturition. Free T4 concentrations also change during pregnancy: in the first trimester a transient rise is often observed.
- (iv) Measurement of FT4 and FT3 is best avoided in patients receiving heparin therapy. (When indicated, blood sample should be taken 10 hours after the last injection of heparin, and analyzing it without delay, can reduce the risk of artifactual hyperthyroinaemia.)
- (v) Phenytoin, carbamazepine and furosemide cause artifactual increase in free T4 (FT4) and decrease in total T4.

BUN / Creatinine Ratio PANAL

Investigation	Observed Value	Unit	Biological Reference Interval
BUN			
BUN	8.57	mg/dL	7.00 - 20.00
Serum Creatinine	0.77	mg/dL	0.55 - 1.20
BUN / Creatinine Ratio	11.12		10:1 - 20:1

Blood urea nitrogen (BUN) is a waste product produced when the liver breaks down protein. The kidneys then filter it out of the blood and eliminate it through urine. Creatinine is a waste product created by the breakdown of phosphocreatine, a molecule stored in muscle tissue. The kidneys filter creatinine from the blood, and its levels in the body reflect the efficiency of the kidney's excretory function. therefore, BUN and creatinine are useful markers in assessing kidney health because they help doctors evaluate the kidney's filtration rate.
