DEPARTMENT OF PATHOLOGY

T3, T4 TSH

| PARAMETER | VALUE | RESULT | REFERENCE RANGE |
|-----------------------------------|--------------|--------|-----------------|
| T3 (TRIIODOTHYRONINE) | 1.493 ng/ml | Normal | 0.69 - 2.15 |
| T4 (THYROXINE) | 103.8 ng/ml | Normal | 52 - 127 |
| TSH (THYROID STIMULATING HORMONE) | 1.950 uIU/ml | Normal | 0.3 - 4.5 |

REFERENCE GROUP REFERENCE RANGE in uIU/mL
As per American Thyroid Association

| | |
|----------------------------|-------------|
| Adult Females (> 20 years) | 0.30- 4.5 |
| Pregnancy | |
| 1st Trimester | 0.10- 2.50 |
| 2nd Trimester | 0.20 - 3.00 |
| 3rd Trimester | 0.30 - 3.00 |

Note:

TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.

1. Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.
1. Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

Clinical Use

- Primary Hypothyroidism
- Hyperthyroidism
- Hypothalamic - Pituitary hypothyroidism
- Inappropriate TSH secretion
- Nonthyroidal illness
- Autoimmune thyroid disease
- Pregnancy associated thyroid disorders
- Thyroid dysfunction in infancy and early childhood

DEPARTMENT OF PATHOLOGY

HBA1c (GLYCOSYLATED HAEMOGLOBIN)

| PARAMETER | VALUE | RESULT | REFERENCE RANGE |
|-----------------------------------|-------|--------|-----------------|
| HBA1 C (GLYCOSYLATED HEAMOGLOBIN) | 5.4 % | Normal | 4 - 6 |

Interpretation

As per American diabetes Association (ADA)

| Reference Group | HbA1c In% |
|--------------------------|------------------|
| Non diabetic >= 18 years | 4.0 - 6.0 |
| At risk (Prediabetes) | >= 6.0 to <= 6.5 |
| Diagnosing diabetes | >= 6.5 |

Therapeutic goals for glycemc control

- Age > 19 years
- Goal of therapy: <7.0
- Action suggested: >8.0
- Age < 19 years
- goal of therapy: < 7.5

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient is recently under good control may still have a high concentration of HbA1c.converse is true for a diabetic previously under good control now poorly controlled.
2. Target goals of <7.0 % may be beneficial in patient with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patient with significant complication of diabetes, limited life expectancy of extensive co-morbid condition, targeting a goal of <7.0% may not be appopriate.

Comments

HbA1c provides an index of average blood glucose levels over the past 8-12 weeks and is a much better indicator of long glycemc control as compared to blood and urinary glucose determination.
