---------------------------------	------	---	---

The hemoglobin A1c test also called HbA1c, glycated hemoglobin test or glycohemoglobin - is the important test for assessment of long term glucose control (also called Glycemic control) and is a better indication of long term glycemic control as than blood glucose determination. Hemoglobin A1c provides an average of your blood sugar control over a six to twelve week period. People with diabetes should have this test every three months to determine whether their blood sugars have reached the target level of control. Those who have their diabetes under good control maybe able to wait longer between the blood tests, but experts recommend checking atleast two times a year. Patients with diseases that affect hemoglobin such as anaemia may get abnormal results with this test. Other abnormalities that can affect the results of the hemoglobin A1c include supplements such as Vitamins C & E and high cholestrol levels. Kidney and liver diseases may also affect the result of the hemoglobin A1c test
