**HbA1c**

TEST NAME	RESULT	UNIT	BIO. REF. RANGE	METHOD
HBA1C, GLYCATE HEAMOGLOBIN, WHOLE BLOOD EDTA	5.3	%		TURBIDIMETRIC

Comment:

Reference range as per American Diabetes Association (ADA):

REFERENCE GROUP	HBA1C IN %
NON DIABETIC ADULTS > 18 YEARS	<5.7
AT RISK (PREDIABETES)	5.7-6.4
DIAGNOSING DIABETES	≥6.5
DIABETICS	
EXCELENT CONTROL	6-7
FAIR TO GOOD CONTROL	7-8
UNSATISFACTORY CONTROL	8-10
POOR CONTROL	>10

Note: Dietary preparation or fasting is not required.

1. A1C test should be performed at least two times a year in patients who are meeting treatment goals (and who have stable glycemic control).
2. Lowering A1C to below or around 7% has been shown to reduce microvascular and neuropathic complications of type 1 and type 2 diabetes. When mean annual HbA1c is <1.1 times ULN (upper limit of normal), renal and retinal complications are rare, but complications occur in >70% of cases when HbA1c is >1.7 times ULN.
3. Falsely low HbA1c (below 4%) may be observed in patients with clinical conditions that shorten erythrocyte life span or decrease mean erythrocyte age. HbA1c may not accurately reflect glycemic control when clinical conditions that affect erythrocyte survival are present. Fructosamine may be used as an alternate measurement of glycemic control.

### Weight loss tips to consider while following the above diet chart

- Superfoods are the biggest key to quick and healthy weight loss. **Superfoods** are nothing but regular foods that have concentrated with nutrients. They could be millets, seeds, certain grass varieties, or even fiber-rich foods. Consume them in measured amounts every day and see your weight melting.
- Always drink enough water. Many times thirst is masked as hunger. So when you are hungry, try drinking water first. It is a proven natural way to fill up the stomach and preventing yourself from gorging later.
- Always preclude lunch with salads or chewy soups. You will be tempted to eat less rice or roti or whatever is for lunch.

- Ensure all your meals have a protein source. If any meal is lacking in it, throw in an egg or dal to ensure protein.
- One day in the week can be designated as a cheat day. It will help you to manage cravings and get back on your Indian diet chart for weight loss.
- On a cheat day, do not overindulge in sweets or fried items. If you feel like it, have a small bite-sized portion to simply curb the craving.
- Never at any point during the diet, starve yourself. There is evidence that starvation, in fact, leads to overeating.
- Remember, the short-term goal is not going to yield results. Hence, always focus on clean, healthy eating that promotes weight loss and at the same time can be adopted throughout your life.
