HbA1C

| Test name | results | units |
|-------------------------------------|---------|-------|
| HbA1c{GLYCOSYLATED HEMOGLOBIN}BLOOD | 6.3 | % |

Interpretation

| As per American Diabetes association {ADA} | |
|--|---|
| Reference Group | HbA1c in % |
| Non diabetic adults ≥ 18 years | 4.0 - 6.0 |
| At risk | ≥ 6.0 to ≤ 6.5 |
| Diagnosing diabetes | > 6.5 |
| Therapeutic goals for glycemic Control | Adults Goal of therapy : < 7.0 Action suggested : > 8.0 |

Note : 1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

2. target goals of < 7.0 % may be beneficial in patients with short duration of diabetes , long life expectancy and no significant cardiovascular disease .In patient with significant complications of diabetes , limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

Comments

HbA1c provides an index of average blood glucose level over the past 8-12 weeks & is a much better indicator of long term glycemic as compared to blood & urinary glucose determinations.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels

| HbA1c % | Mean plasma glucose {mg/dl } | HbA1c % | Mean plasma glucose {mg/dl} |
