BLOOD GROUPING AND RH

Units

Referral Ranges

Result

Parameters

BLOOD GROUP

Automated microcolumn gel method

" O "

RH TYPE

POSITIVE

INTERPRETATION

1. If Rh is Du positive it is best considered as Rh negative as recipient and Rh positive as donor. Proper Cross matching is recommended before transfusion.
2. In case of forward and reverse grouping discrepancy, clinical correlation and repeat sample analysis is recommended.
3. For Infants below 6 months only forward grouping is performed.
4. A sub-grouping is recommended after the age of 6 months.

Suggested Clinical Correlation * If necessary, Please discuss

BIOCHEMISTRY

Prostate Specific Antigen (PSA), Total

Sample Type: Serum-Biochemistry

Test Description	Value(s)	Unit	Reference Range
Prostate Specific Antigen (PSA) Total <i>(Method : ECLIA)</i>	1.3	ng/mL	0 - 4 ng/mL

Clinical Information:

- Elevated serum PSA concentration can only suggest the presence of prostate cancer until a biopsy is performed. Serum PSA concentrations can also be elevated in benign prostatic hypertrophy or inflammatory conditions of the prostate and other adjacent tissues. PSA is generally not elevated in apparently healthy men or men with non-prostatic carcinoma.
- Prostate-specific antigen (PSA) has been used in conjunction with digital rectal examination (DRE) for early detection of prostate cancer.
