Final Test Report

Page 1 of 1

Specimen	Test Name	Result	Units	Reference Range / Method
IMMUNOLOGY				
Thyroid function tests				
Serum	T3	1.32	ng/ml	0.80 - 2.00 (ECLIA)
Serum	T4	6.67	ug/dl	5.10 - 14.10 (ECLIA)
Serum	TSH	2.480	uIU/ml	0.270 - 5.350 (ECLIA)

Note: TSH has a diurnal rhythm, peaks at 2.00-4.00 am and has lowest level at 5.00-6.00 pm with ultradian variation. Hence thyroid test is only a snapshot of what is occurring within a dynamic system and for treatment purpose, the results should be accessed in conjunction with patient medical history, clinical examination & other tests/finding for confirmation. Many multivitamins (such as Vit B7), supplements (especially hair, skin, and nail) and over-the-counter and prescription medications may affect thyroid test results, and their use should be discussed with the healthcare practitioner prior to testing. When a high serum TSH concentration and normal free T4 is found, repeat measurement 3-6 months later along with thyroid antibodies after excluding nonthyroidal illness and drug interference is recommended.

Serum	PSA	0.721	ng/ml	0.000 - 2.000 (ECLIA)
-------	-----	-------	-------	-----------------------

This assay, a quantitative in vitro diagnostic test for total (free + complexed) prostate-specific antigen (tPSA) in human serum and plasma, is indicated for the measurement of total PSA in conjunction with digital rectal examination (DRE) as an aid in the detection of prostate cancer in men aged 50 years or older. Prostate biopsy is required for diagnosis of prostate cancer. The test is further indicated for serial measurement of tPSA to aid in the management of cancer patients.

The PSA test may give false-positive or false-negative results due to various factors. Rigorous physical activity affecting the prostate, such as bicycle riding, may cause a temporary rise in PSA level. Ejaculation within 24 hours of testing can be associated with elevated PSA levels and should be avoided. Large doses of some chemotherapeutic drugs, such as cyclophosphamide and methotrexate, may increase or decrease PSA levels. An inflammation or trauma of the prostate (e.g. in cases of urinary retention or following rectal examination, cystoscopy, coloscopy, transurethral biopsy, laser treatment or ergometry) can lead to PSA elevations of varying duration and magnitude.

X-RAY CHEST PA VIEW

OBSERVATION:

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

Both Lung field are normal

No Plural Diffusion.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic ribcage Appear Normal.

Soft tissues of the chest wall are normal.

NO Consolidation seen.

IMPRESSION:

Abdomen Pelvic Ultrasound Scan Report

Name : Mr. Ravi Shankar

Date:03/08/2024

Ref by : *Bank of Baroda*

Age / Gender : 40 Years / Male

Liver : Normal in size, shape and increased echotexture. No focal lesion seen.

No intrahepatic biliary dilatation seen.MPV & CBD is normal

Gall Bladder: GB is normal. Normal in wall thickness, Intraluminal Contents Clear.

Pancreas : Normal in size and echotexture. No focal lesions.Pancreatic duct appears normal.

Spleen : Normal in size, shape and echotexture.

Kidneys : Both Kidney's appeared normal in size, shape and position.

No Calculi / Hydronephrosis . Cortico Meduallary

differentiation appeared good. Both Ureter's not dilated.

Right Kidney : 97 x 18 mm **Left Kidney** : 100 x 16 mm

Urinary Bladder : Normal in contour and wall thickness with clear contents.

Prostate : Measures 32 x 31 x 32 mm, Volume =17 cc Normal in size, shape and echotexture.

IMPRESSION:

- Fatty Liver Grade I.
- Otherwise Normal Sonologic Study.
