Dear Dr. Charu Kohli Clinic

We have received a booking request with the following details. Provide your confirmation by clicking on the Yes button.

- 74
- 159

You confirm this booking? Yes No

Name : KRISHANKANT
Contact Details : 9871895363
Hospital Package Name : Mediwheel Full Body Annual Plus Above 50 Male
Location : A C-234, Block C, Defence Colony,
Appointment Date : 09-06-2024

Member Information		
Booked Member Name	Age	Gender
KRISHANKANT	40 year	Male

Tests included in this Package

- Urine analysis
- Blood Group
- CBC
- HbA1c
- Lipid Profile
- Kidney Profile
- Liver profile
- Blood Glucose (Post Prandial)
- Prostate Specific Antigen (PSA Male)
- Thyroid Profile
- Urine Sugar Fasting
- Urine Sugar PP
- ESR
- Blood Glucose (Fasting)
- TMT OR 2D ECHO (Any 1) Chosen By Candidate
- Chest X-ray ✓
- ECG
- USG Whole Abdomen
- Dietician Consultation
- Eye Check-up consultation
- Ent Consultation

Name: KRISHNA KANT
Date: August 10, 2024

WHOLE ABDOMEN SCAN

Liver is normal in size and echotexture is brightened. Partially obliterated intrahepatic biliary radicles and normal appearing venous channels noted. No focal lesion in either lobes. Portal vein is normal. No sub-diaphragmatic collection or pleural effusion.

Gall bladder is normal distended and shows echofree lumen.
CBD: not dilated, apparently echofree.

Both the kidneys are normal in size, position and echopattern with normal corticomedullary differentiation.

RK: 10.65 x 4.57 cm
LK: 10.02 x 5.89 cm, and shows a calculus of 4.8 mm.

Pancreas is of normal size & echopattern. No focal lesion or peri-pancreatic collection.

Spleen is of normal size and echopattern. No focal lesion or calcification. Splenic vein is not dilated.

Aorta and IVC are normal. No retroperitoneal lymphadenopathy.

Urinary bladder shows normal distension and shows normal wall-thickness. No calculus or mass.

Prostate is normal in size measures 3.34 x 4.26 x 2.60 cm, volume measures 20.82 cc echopattern is homogenous.

Bowel loops are normal.

No free fluid is seen in abdomen.

IMPRESSION:

Grade-II fatty liver (steatorrhic) with left renal calculus, otherwise sonological study is within normal limits.

Collected At	DCKC	Printed Date/Time	10/08/2024 17:03:14

Test Name	Value	Unit	Biological Ref Interval
-----------	-------	------	-------------------------

Blood Group ABO ,EDTA <i>Method : Forward Grouping</i>	"A"		
Rh Typing ,EDTA <i>Method : Forward Grouping</i>	POSITIVE		
HbA1c ,EDTA <i>Method : Fluorometric method</i>	5.2	%	4.0 - 5.6

INTERPRETATIONS:-

NORMAL RANGE	4.00 - 5.60	%
---------------------	--------------------	----------

Pre Diabetic/ Higher chance of getting diabetes	5.70	- 6.20	%
Good Diabetic Control	6.20	- 6.80	%
Fair Diabetic Control	6.80	- 7.60	%
Uncontrolled Diabetes -action suggested	>7.6		%

Notes:-
 Glycosylated Haemoglobin is a specific component of HBA1C and is the blood glucose bound to it. This test is an index of carbohydrate in balance during the preceding two months. The estimation is of greater importance for specific group of patient. This result are not affected by time, meal intake exercise, diabetic drugs, emotional Stress etc. HbA1c should be routinely monitored, ideally at least every 3 months.

BIOCHEMISTRY

LIPID PROFILE

Total Lipids ,Serum Plain	563	mg/dl	400 - 700
Serum Cholesterol ,Serum Plain Method: CHOD-PAP	206	mg/dl	0 - 200
Serum Triglycerides ,Serum Plain Method: GPO-PAP	151	mg/dl	60 - 165
Serum HDL Cholesterol ,Serum Plain Method: Direct Method	38	mg/dl	40 - 70
Serum LDL Cholesterol ,Serum Plain Method: Calculated	137.8	mg/dl	30.0 - 100.0
Serum VLDL Cholesterol ,Serum Plain Method: Calculated	30.2	mg/dl	24.0 - 45.0
Total CHO/HDL Cholesterol Ratio ,Serum Plain Method: Calculated	5.42		
LDL/HDL Cholesterol Ratio ,Serum Plain Method: Calculated	3.63		

Guidance for Total Blood Cholesterol Levels 11 to 12 hour fasting samples

Desirable: Less than 200 mg/dl

Borderline: High Risk: 200 to 239 mg/dl

High Risk: 240 mg/dl and over, on repeated values

Critical Level for Cardiac Patients: Less than 200 mg/dl

NOTE: High HDL has generally been found to be protective, decreasing the risk of coronary artery disease (CAD) in most people. However, some recent studies have shown that in some people with high HDL, the HDL is not protective and may, in fact, be a higher risk for CAD than in people with normal HDL levels. In one study it was shown that people with CAD and high HDL had underlying genetic anomalies in enzymes involved in lipid turnover. Another study showed that high levels of abnormally large HDL particles were associated with increased risk of CAD. Factors that elevate HDL concentrations include chronic alcoholism, treatment of alcoholism, nephrotic syndrome, and treatment of hypothyroidism, statins, or fibrates. Smoking raises levels of LDL cholesterol, while quitting smoking leads to a decrease in the plasma HDL level.

Triglycerides Female: 40 - 140

Male: 50 - 150

Adult Female <100 mg/dL

Optimal <100 mg/dL

Very Optimal/above optimal 100 - 129 mg/dL

High 130 - 159 mg/dL

High 160 - 199 mg/dL

Very High >200 mg/dL

KIDNEY FUNCTION TEST (KFT)

Blood Urea ,Serum Plain Method: Urine -UV	16.2	mg/dl	15.0 - 45.0
Serum Creatinine ,Serum Plain Method: Jaffe Method, Jaffe's	0.86	mg/dl

IMMUNOASSAY

TOTAL THYROID PROFILE

Total T3 .Serum Plasma	1.10	ng/mL	0.69 - 2.15
Total T4 .Serum Plasma	12.60	ug/dl	5.20 - 12.70
TSH	3.69	uIU/ml	0.30 - 4.50

Comments	Age Group	Biological Reference Range
	1-2 Days	3.3-3.13 uIU/ml
	3-7 Days	0.7-15.4 uIU/ml
	10 Days - 5 Months	1.7-9.1 uIU/ml
	5 Months - 2 Years	0.7-6.8 uIU/ml
	2 Years - 12 Years	0.64-6.27 uIU/ml
	12 Years - 18 Years	0.51-4.94 uIU/ml
	> 18 Years	0.35-6.50 uIU/ml

Adults

Note: TSH levels are subject to diurnal variation, rising several hours before the onset of sleep, reaching peak levels between 11 pm to 6 am. TSH concentrations are observed during the afternoon. Diurnal variation in TSH level approximates + 50 %, hence time of the day has influence on the intensity of serum TSH concentration. Although elevated TSH levels are nearly always indicative of primary hypothyroidism, and may be seen in secondary thyrotoxicosis.

Newborn

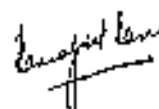

In a very low birth weight baby (particularly premature neonates) immaturity of the hypothalamo-pituitary-thyroid axis may mask primary congenital hypothyroidism. It is recommended that the test be repeated two weeks after birth in babies 1000-1500 gm and at four weeks in those <1000 gm. Specimen collection prior to 24 hours of age after blood transfusion and prematurity can affect this.

Screening

Nearly 90% of all cases are detected by newborn screening. A small number of babies may test normal in the newborn screen but later develop hypothyroidism.

-----------	-------	------	-------------------------

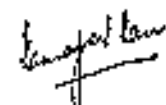

Total PSA ,Serum Plain 0.44 ng/ml 0.00 - 4.00

Increased Value is seen in Benign Prostatic Hypertrophy(BPH), Prostatitis, or Prostate Cancer .
 When total PSA concentration is <2.0 ng/ml, the probability of prostate cancer in asymptomatic men is low.
 When total PSA concentration is >10.0 ng/mL, the probability of cancer is high and prostate biopsy is generally recommended.
 The Total PSA range of 4.0 to 10.0 ng/ml has been described as a diagnostic "gray zone," in which the Free/Total PSA ratio helps to determine the relative risk of prostate cancer.
 Therefore, some urologists recommend using the Free/Total ratio to help select which men should undergo biopsy.
 However even a negative result of prostate biopsy does not rule-out prostate cancer. Up to 20% of men with negative biopsy results have subsequently been found to have cancer.
 Higher total PSA levels and lower percentages of free PSA are associated with higher risks of prostate cancer. Based on free/total PSA ratio, the percent probability of finding prostate cancer on a needle biopsy by age in years:

Free PSA as a percent of Total PSA	Probability of carcinoma prostate when total PSA is 4.1 - 10.0 ng /ml
≥=	26.8 %
20 - 25	16 %
15 - 20	20 %
10 - 15	28 %
0 - 10	56 %

Comments:-

False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy.PSA total and free levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies and nonspecific protein binding.Results obtained with different assay kits cannot be used interchangeably.All results should be correlated with clinical findings and results of other investigations
