HbA1c

TEST NAME	RESULT	UNIT	BIO. REF. RANGE	METHOD
HBA1C, GLYCATED HEAMOGLOBIN, WHOLE BLOOD EDTA	5.5	%		TURBIDIMETRIC

Comment:

Reference range as per American Diabetes Association (ADA):

REFERENCE GROUP	HBA1C IN %
NON DIABETIC ADULTS > 18 YEARS	<5.7
AT RISK (PREDIABETES) DIAGNOSING DIABETES	5.7-6.4
DIABETICS	≥6.5
EXCELENT CONTROL	6-7
FAIR TO GOOD CONTROL	7-8
UNSATISFACTORY CONTROL	8-10
POOR CONTROL	>10

Note: Dietary preparation or fasting is not required.

1. A1C test should be performed at least two times a year in patients who are meeting treatment goals (and who have stable glycemic control).
2. Lowering A1C to below or around 7% has been shown to reduce microvascular and neuropathic complications of type 1 and type 2 diabetes. When mean annual HbA1c is <1.1 times ULN (upper limit of normal), renal and retinal complications are rare, but complications occur in >70% of cases when HbA1c is >1.7 times ULN.
3. Falsely low HbA1c (below 4%) may be observed in patients with clinical conditions that shorten erythrocyte life span or decrease mean erythrocyte age. HbA1c may not accurately reflect glycemic control when clinical conditions that affect erythrocyte survival are present. Fructosamine may be used as an alternate measurement of glycemic control.
