TEST(S)	RESULT(S)	UNITS	BIOLOGICAL REFERENCE RANGE
HbA1C SAMPLE TYPE: WHOLE BLOOD EDTA M METHOD: immunoturbidimet			
Glycosylated Haemoglobin % (Hb A1c)	: 5.3	%	4.8-5.9
Mean Plasma Glucose (MPG)	: 105.7		

NOTES: 1. The HbA1c test shows your average blood sugar for last 3 months.
2. The HbA1c test does not replace your day-to-day monitoring of blood glucose.
Use this test result along with your daily test results to measure your overall, diabetes control.

How does HbA1c works?

The HbA1c test measures the amount of sugar that attaches to protein in your red blood cells. RBCs live for about 3 months, so this test shows your average blood sugar levels during that time. Greater the level of sugar & longer it is high, the more sugar that will attach to RBCs.

Why is this test so important?

Research studies demonstrated that the closer to normal your HbA1c level was, the less likely your risk of developing the long-term complications of diabetes. Such problems include eye disease, nerve damage, heart and blood vessel disease and kidney problems.

Who should have the HbA1c test done?

Everyone with diabetes can benefit from taking this test. Knowing your HbA1c level helps you and your doctor decide if you need to change your diabetes management plan.

How often should you have a HbA1c test?

You should have this test done when you are first diagnosed with diabetes.

Then at least twice a year if your treatment goals are being met & blood glucose control is stable.

More frequent HbA1c testing (4 times / year) is recommended if your therapy has been recently changed or if you are not
