X-RAY CHEST (PA VIEW)

Both lung fields appear normal.
No e/o Koch's lesion or consolidation seen.
Both CP angles appear clear.
Both domes of diaphragm appear normal.
Heart size and aorta are within normal limits.
Bony thorax under vision appears normal.
Both hila appear normal.

PLASMA GLUCOSE

Fasting Blood Sugar (FBS) <i>Hexokinase Method</i>	87.2	mg/dL	70 - 110
---	------	-------	----------

Post Prandial Blood Sugar (PPBS) <i>Hexokinase Method</i>	103.9	mg/dL	70 - 140
--	-------	-------	----------

Criteria for the diagnosis of diabetes 1. HbA1c \geq 6.5 *
Or
2. Fasting plasma glucose $>$ 126 gm/dL. Fasting is defined as no caloric intake at least for 8 hrs.
Or
3. Two hour plasma glucose \geq 200mg/dL during an oral glucose tolerance test by using a glucose load containing equivalent of 75 gm anhydrous glucose dissolved in water.
Or
4. In a patient with classic symptoms of hyperglycemia or hyperglycemic crisis, a random plasma glucose \geq 200 mg/dL.
*In the absence of unequivocal hyperglycemia, criteria 1-3 should be confirmed by repeat testing.

- LDL Cholesterol level is primary goal for treatment and varies with risk category and assesment
 - For LDL Cholesterol level Please consider direct LDL value
- Risk assessment from HDL and Triglyceride has been revised. Also LDL goals have changed.
- Detail test interpreation available from the lab
 - All tests are done according to NCEP guidelines and with FDA approved kits.
 - LDL Cholesterol level is primary goal for treatment and varies with risk category and assesment
- # For test performed on specimens received or collected from non-KSHIPRA locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point generation of the said specimen by the sender.
KSHIPRA will be responsible Only for the analytical part of test carried out. All other responsibility will be of referring Laboratory.
. All other responsibility will be of referring Laboratory.

STOOL EXAMINATION

Colour : Yellow
Consistency : Semi Solid

CHEMICAL EXAMINATION

Occult Blood : Negative

Peroxidase Reaction with o-Dianisidine

Reaction : Acidic

pH Strip Method

Reducing Substance : Absent

Benedict's Method

MICROSCOPIC EXAMINATION

Mucus : Nil
Pus Cells : 1 - 2/hpf
Red Cells : Nil
Epithelial Cells : Nil
Vegetable Cells : Nil
Trophozoites : Nil
Cysts : Nil
Ova : Nil
Neutral Fat : Nil
Monilia : Nil

Note: Stool occult blood test is highly sensitive to peroxidase like activity of free hemoglobin.

False negative: False negative occult blood test may be observed in case of excess (>250mg/day) Vitamin C intake and in case of occasional unruptured RBCs.

False positive: False positive occult blood test may be observed in stool samples containing vegetable peroxidase (turnips, horseradish, cauliflower, broccoli, cantaloupe, parsnips) and myoglobin from food (meat diet) intake.

HEMOGLOBIN A1 C ESTIMATION

Specimen: Blood EDTA

Hb A1C <i>Boronate Affinity with Fluorescent Quenching</i>	5.6	% of Total Hb	Poor Control : > 7.0 % Good Control : 6.2-7.0 % Non-diabetic Level : 4.3-6.2 %
---	-----	---------------	--

Mean Blood Glucose <i>Calculated</i>	122.06	mg/dL	
---	--------	-------	--

Degree of Glucose Control Normal Range:

Poor Control >7.0% *

Good Control 6.0 - 7.0 %**Non-diabetic level < 6.0 %

* High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy, etc.

* Some danger of hypoglycemic reaction in Type I diabetics.

* Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

EXPLANATION :-

*Total haemoglobin A1 c is continuously synthesised in the red blood cell through its 120 days life span. The concentration of HbA1c in the cell reflects the average blood glucose concentration it encounters.

*The level of HbA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose concentration over an extended time period and remains unaffected by short-term fluctuations in blood glucose levels.

*The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half life of a red blood cell is sixty days, HbA1c has been accepted as a measurement which reflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.

*It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures.

HbA1c assay Interferences:

*Erroneous values might be obtained from samples with abnormally elevated quantities of other Haemoglobins as a result of either their simultaneous elution with HbA1c(HbF) or differences in their glycation from that of HbA(HbS)

-----------	--------	------	--------------------

THYROID FUNCTION TEST

T3 (Triiodothyronine) <i>Chemiluminescence</i>	1.03	ng/mL	0.87 - 1.81
T4 (Thyroxine) <i>Chemiluminescence</i>	8.28	µg/dL	5.89 - 14.9
TSH (ultra sensitive) <i>Chemiluminescence</i>	3.654	µIU/ml	0.34 - 5.6

SUMMARY The hypophyseal release of TSH (thyrotropic hormone) is the central regulating mechanism for the biological action of thyroid hormones. TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid. **LIMITATION** Presence of autoantibodies may cause unexpected high value of TSH
