<b>I.P.No./Bill No.</b>	: AHBHC111680	<b>Scanned on</b> : 12-Nov-2022 12:59
<b>Accession Number</b>	: 10601.1322018944	<b>Reported On</b> :
<b>Referring Doctor</b>	: Dr. MHC	

### BILATERAL MAMMOGRAPHY

**PROCEDURE:**

Both breasts were radiographed in craniocaudal and medio-lateral oblique views with compression. Markers are in the axillary / lateral portion of the breast.

*Clinical Indication: - Screening.*

**OBSERVATIONS:**

*Breast parenchyma composition – Scattered fibro glandular tissue (ACR Type – B).*

*Diffuse calcifications seen bilaterally.*

*Few clusters of calcifications noted in right medial central quadrant with no associated densities.*

*No architectural distortion seen.*

*Skin and subcutaneous tissues are normal.*

*Small bilateral axillary lymph nodes seen.*

**IMPRESSION: -**

**BIRADS ASSESSEMENT CATEGORY (III): Probably benign finding – short interval follow-up suggested (< 2 % malignancy).**

**BI-RADS Assessment Categories**

Category 0 Need Additional Imaging Evaluation  
 Category 1 Negative  
 Category 2 Benign Finding  
**Category 3 Probably Benign Finding – Short Interval Follow-Up Suggested (< 2 % malignancy)**  
 Category 4 Suspicious Abnormality – Biopsy Should Be Considered  
 (Subcategory 4 A -> 2% <= 10%, 4 B > 10% <= 50%; 4C > 50% < 95%)  
 Category 5 Highly Suggestive of Malignancy – Appropriate Action Should Be Taken (<= 95%)  
 Category 6 Known case of Breast Malignancy.

**BI-RADS Breast composition categories**

A – Almost entirely fatty  
 B – Scattered fibro glandular tissue  
 C – Heterogenously dense - may obscure small masses.  
 D – Extremely dense – lowers sensitivity of mammography.

Please bring your previous reports during your next visit for better evaluation.

Note: Though mammography is the single best method of screening breast cancer, it does not detect all breast cancers. The false negative rate of mammography is approximately 10%. It is important for you to do breast self - examination on a continuing basis. If a lump is felt, consult your doctor.

**ULTRASOUND WHOLE ABDOMEN**

**Clinical Information:** *General health checkup.*

Liver appears normal in size, shape and echopattern. No focal parenchymal lesions identified. No evidence of intra/extrahepatic biliary tree dilatation noted. Portal vein appears to be of normal size.

Gall bladder moderately distended. No definite calculi identified. No evidence of abnormal wall thickening noted.

Spleen appears normal in size, shape and echopattern. No focal parenchymal lesions identified.

Pancreas appears normal in size, shape and echopattern. No definite calcification or ductal dilatation noted.

Both kidneys appear normal in size, shape and echopattern. Corticomedullary differentiation appears maintained. No evidence of calculi or hydronephrosis seen on either side.

Urinary bladder distended and appears normal. No evidence of abnormal wall thickening noted.

Uterus appears normal for age. Endometrial thickness measures ~ 3 mm. Both ovaries: Not visualized – atrophic.

No evidence of ascites or pleural effusion seen.

**IMPRESSION:**

*USG study of the abdomen shows no definite abnormality.*

- Suggested clinical correlation.

### **2D AND DOPPLER FINDINGS**

Rhythm : Sinus Rhythm  
Mitral valve, tricuspid valve, aortic valve and pulmonic valve normal  
Trivial tricuspid valve regurgitation  
Left ventricle : Normal size, Normal systolic function, no RWMA, Normal diastolic function.  
Left atrium is normal.  
Right ventricle and right atrium are normal. Normal RV function, TAPSE- > 17mm.  
IVC normal and collapsing >50%  
Intact inter atrial and inter ventricular septum.  
No LV/LA masses, vegetation or thrombus.  
Main pulmonary artery and aorta are normal.  
No pericardial thickening or effusion.

### **ECHO DIAGNOSIS**

Normal left ventricular systolic function  
No resting Regional wall motion abnormalities  
Normal LV diastolic function  
Normal pulmonary artery pressure
