

Pt Name Shubhanshu UHID Age 56 Y Gender Male Date 8/6/2024

Chest X-Ray Report

- Exposure : Appropriate
- Trachea : Central
- Cardiac Shadow : Appears Normal
- CP Angles : Sharp and Clear
- Diaphragm : Appears Normal in Shape and Counter
- B/L Lung Parenchyma : Appears Normal
- Prominent bronchovascular markings present

Final Impression : findings correlate clinically

DR. POOJA GARG

MD RADIOLOGIST

FELLOWSHIP IN WOMEN'S IMAGING

DR. VENUS GARG

MD RADIOLOGIST

PG DIP IN MSK ULTRASOUND (SPAIN)

NAME: SUBHASH KUMAR

AGE/SEX: 56 Y/M

DATE: 08.06.2024

EXAM: ULTRASOUND WHOLE ABDOMEN

LIVER: There is a slight and diffuse increase of parenchymal echogenicity with normal visualization of the diaphragm and of the portal vein wall- suggestive of grade-I fatty infiltration.

Normal in size (13.4 cm) and outline.

Margins are smooth and regular.

No focal intra-hepatic space occupying lesion detected.

Intra-hepatic biliary radicals are not dilated.

Intrahepatic vascular patterns are within normal limits.

Portal vein is normal in calibre.

GALL BLADDER: Well distended. Wall thickness is within normal limits.

No luminal debris, calculus and mass seen.

Pericholecystic fat planes are normal with no sign of pericholecystic fluid.

Common bile duct is normal in calibre.

PANCREAS: The head and body of the pancreas are normal in size, outline and echopattern. No focal space occupying lesion seen. No definitive peripancreatic collection noted. Main pancreatic duct not dilated.

SPLEEN: Normal in size (10.3 cm), outline and echotexture. No space occupying lesion is noted. Splenic hilum appears normal.

KIDNEYS: Both the kidneys are normal in size, shape, outline and location.

Cortico- medullary differentiation is maintained. It shows normal cortical echogenicity.

Parenchymal thickness is normal.

Central echogenic complexes have a normal appearance with no evidence of any hydronephrosis.

No calculus seen.

Right kidney- 9.6 x 4 cm PT = 16 mm.

Left kidney- 10.4 x 5.1 cm. PT = 16 mm. An anechoic cortical cystic lesion of size 8.3 x 11 mm is noted at the interpolar region of the left kidney.

URETERS: No evidence of any obvious dilatation.

****Note:** For any typographical error or discrepancy please back to get it corrected. Severe fatty liver or obese patient may obscure the findings. This is a professional opinion and not final diagnosis. All medical modalities have limitations. An inter-operator variations may be seen. Report should be interpreted in correlation with clinical pathological findings. Further imaging is recommended if clinically indicated. NOT VALID FOR MEDICO-LEGAL PURPOSE

MD RADIOLOGIST
PG DIP IN MSK ULTRASOUND (SPAIN)

URINARY BLADDER: Partially distended.

Wall thickness is normal.

No evidence of any trabeculation, sacculation or diverticulation seen.

No intravesical debris, calculus or mass noted.

PROSTATE: Visualized prostate is mildly enlarged in size measuring 26.6 cc in volume and normal in outline. No focal space occupying lesion seen. **Coarse specks of calcific foci are noted within the prostatic parenchyma.**

RIGHT ILLIAC FOSSA: No focal fluid collection or mass lesion in RIF. No obvious inflamed mesentery or bowel wall thickening seen. No probe tenderness noted. Appendix measures 5.2 mm in its outer diameter. No evidence of any significant free fluid or lymphadenopathy seen.

IMPRESSION:

- Grade-1 fatty liver
- Left renal simple cortical cyst
- Grade-1 prostatomegaly

Advised clinical correlation and further evaluation.

RESULTS
 Exercise Duration : 9:07 Minutes
 Max Heart Rate : 141 bpm 85 % of target heart rate 164 bpm
 Max Blood Pressure : 145/99 mmHg
 Max Work Load : 10.11 METS
 Reason of Termination : Achieved THR

IMPRESSIONS
 Mr. SHUBASH KUMAR was subjected to exercise upto the 0:05 minute of Stage 4 of BRUCE Protocol (Total Time 9:07 minute) when the test was terminated because of Achieved THR.
 He achieved 138 bpm 84% THR(164 BPM) and 20010 RPP at 10.11 METS work load.
 No significant ST, T or R wave changes were seen during or after the exercise.
 No arrhythmia or conduction abnormality seen.
 Chronotropic and inotropic response were normal.
 No signs of LV dysfunctions seen at peak exercise.

Reg. No. SHCO-2020-0369
A full NABH Accredited Hospital

BIOCHEMISTRY

Test Name	Result	Unit	Reference Range
Liver Function Test			
Bilirubin- Total	0.47	mg/dl	0.1 - 1.2
Bilirubin- Direct	0.18	mg/dL	0.0 - 0.4
Bilirubin- Indirect	0.29	mg/dL	0.1 - 0.8
SGPT	26.10	IU/L	05 - 40
SGOT	24.50	IU/L	05 - 40
Alkaline Phosphatase	161.1	IU/L	Male : 53 -128 Child : 54 -369 Neo: 54-369
Total Proteins	7.01	gm/dl	6.0 - 8.0
Serum Albumin	4.43	gm/dl	3.2 -5.5
Serum Globulin	2.58	gm/dl	2.3 -3.5
A/G ratio	1.72		1.0 -2.3

NOTE :

1. Alanine Aminotransferase (ALT): Elevated levels may indicate liver damage, often due to conditions like hepatitis or fatty liver disease.
2. Aspartate Aminotransferase (AST): Increased levels can indicate liver damage but are less specific than ALT.
3. Alkaline Phosphatase (ALP): Elevated levels can indicate liver or bone disease.
4. Total Bilirubin: Increased levels may indicate liver dysfunction or bile duct obstruction.

In LFT these tests are performed collectively to assess liver health comprehensively

BIOCHEMISTRY

Test Name	Result	Unit	Reference Range
LIPID PROFILE			
S. Cholesterol	178.1	mg/dl	Desirable Chol: 200mg/DI Borderline Chol: 200-239mg/DI High Chol: >240mg/DI
S. Triglycerides	391.6	mg/dl	Upto 190
HDL Cholesterol	48.49	mg/dL	30 - 70
LDL Cholesterol	51.29	mg/dl	Upto 150
VLDL Cholesterol	78.32	mg/dl	07 to 35
S.Cholesterol/HDL Ratio	3.67		LOW RISK - 3.3 To 4.4 AVERAGE RISK - 4.4 TO 7.1 MODERATE RISK - 7.1 TO 11.1 HIGH RISK - >11.0
LDL Chole/HDL Chole	1.06		LOW RISK - 0.5 To 3.0 MODERATE RISK - 3.0 TO 6.0 HIGH RISK - >6.0
S.Triglycerides/HDL Chole	8.08		Desirable : < 3.00

NOTE :

A Lipid Profile is a blood test that measures the levels of various types of lipids (fats) and cholesterol in the blood. This test helps assess the risk of developing cardiovascular diseases, such as heart disease and stroke.

1. Total Cholesterol: This measures the total amount of cholesterol in the blood, including low-density lipoprotein (LDL) cholesterol, high-density lipoprotein (HDL) cholesterol, and cholesterol in built up in the arteries and increase the risk of heart disease.

2. Low-Density Lipoprotein (LDL) Cholesterol: Often referred to as bad cholesterol, LDL cholesterol can build up in the arteries and increase the risk of heart disease.

3. High-Density Lipoprotein (HDL) Cholesterol: Known as good cholesterol, HDL helps remove LDL cholesterol from the bloodstream, reducing the risk of heart disease.

4. Triglycerides: Triglycerides are a type of fat found in the blood. Elevated triglyceride levels are associated with an increased risk of heart disease, especially when combined with low HDL cholesterol levels.

The interpretation of Lipid Profile results involves assessing the levels of these lipid components and their ratios, considering factors such as age, sex and medical history. Abnormal lipid levels may require lifestyle modifications (e.g., diet, exercise) and, in some cases, medication to reduce the risk of cardiovascular disease. Routine monitoring of lipid levels is recommended for individuals with risk factors such as obesity, diabetes, hypertension, and a family history of heart disease.

BIOCHEMISTRY

Test Name	Result	Unit	Reference Range
Blood Sugar Fasting			
Blood Sugar Fasting	233.2	mg/dl	60-110
HbA1C			
HbA1C	9.5	%	Non Diabetic :04 -06 Excellent Control : 06 -07 % Fair Control : 07 - 08% Unsatisfactory : 08 - 10% Poor Control: Above 10%

Estimated Mean Glucose (eAg) 225.95 mg%

Interpretation :

Glycosylated Haemoglobin is accurate and true index of the " Mean Blood Glucose Level in the body for the previous 2-3 months.

HbA1c is an indicator of glycemic control. HbA1c represent average glycemia over the past six to eight weeks.

Glycation of hemoglobin occurs the entire 120 days life span of the red blood cell, but with in this 120 days.

Recent glycemia has the largest influence on the HbA1c value.

Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the mouth before sampling, 25% in the month before that, and the remaining 25% in months 2-4.

Note-

- Routine Urine analysis provides valuable diagnostic information about kidney function, urinary tract health, and overall health status.
- It helps in early detection and management of many health conditions.
- Results are compared against normal values to identify any abnormalities or health concerns.
- Abnormal findings may require further investigation or medical follow-up.

Date of sample collection: 08-06-2024	Date of Reporting : 08-06-2024	

Test Name	Results	Units	Bio.Ref.Interval
PSA (PROSTATE SPECIFIC ANTIGEN), TOTAL,SERUM *	1.00	ng/ml	Conventional for all ages: <= 4.00 50-59 Years: 0-3.5

Note :

- False low/ high results may be observed in patients receiving mouse monoclonal antibodies for diagnosis/therapy or due to interference by heterophilic. Antibodies & nonspecific protein binding or on high dose biotin therapy.
- Immediate PSA testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels. Elevated levels of PSA can also be seen in Benign Prostatic disease, Prostatitis and/or Urinary tract infection.
