CLINICAL BIOCHEMISTRY

Test Name	Obtained Value	Units	Bio. Ref. Intervals(Age/Gender specific)
PLASMA GLUCOSE FASTING (FBS)	77.7	mg/dL	70 - 110

Methodology: Hexokinase

Interpretation Notes:

Interpretation (In accordance with the American diabetes association guidelines):

- A fasting plasma glucose level below 100 mg/dL is considered normal.
- A fasting plasma glucose level between 100-126 mg/dL is considered as glucose intolerant or pre diabetic. A fasting and post-prandial blood sugar test (after consumption of 75 gm of glucose) is recommended for all such patient.
- A fasting plasma glucose level of above 126 mg/dL is highly suggestive of a diabetic state. A repeat fasting test is strongly recommended for all such patients. A fasting plasma glucose level in excess of 126 mg/dL on both the occasions is confirmatory of a diabetic state.

Sample Type : Plasma

IMMUNOLOGY

Test Name	Obtained Value	Units	Bio. Ref. Intervals(Age/Gender specific)
PROSTATE SPECIFIC ANTIGEN -TOTAL	0.76	ng/mL	0.0-4.0

Microbiology : Chemiluminescence

Interpretation Notes:

The PSA test and digital rectal exam (DRE) may be used to screen both asymptomatic and symptomatic men for prostate cancer. PSA is a protein produced primarily by cells in the prostate and most of the PSA is released into semen, but small amounts of it are also released into the blood. PSA exists in two forms in the blood: free (not bound) and complex (cPSA, bound to other proteins). Lab tests can measure free PSA or total PSA (bound plus unbound). Some organizations, such as the U.S. Preventive Services Task Force, feel that the harms associated with over-diagnosis and over-treatment outweigh the potential benefits and advise against using PSA to screen for prostate cancer in healthy men of any age. The American Cancer Society and the American Urological Association recommend that men discuss the advantages and disadvantages of PSA-based screening for prostate cancer with their healthcare provider before making an informed decision about whether to be screened or not. While elevated PSA levels are associated with cancer, they may be caused by other conditions, such as benign prostatic hyperplasia (BPH) and inflammation of the prostate. An elevated PSA may be followed by a biopsy, which has risk of complications such as pain, fever, blood in the urine, or urinary tract infection. (Read the article on Anatomic Pathology for more information about biopsies.)

IMMUNOLOGY

THYROID PROFILE

Test Name	Obtained Value	Units	Bio. Ref. Intervals(Age/Gender specific)
TOTAL TRIIODOTHYRONINE (T3) <i>Methodology: Chemiluminescence Immunoassay(CLIA)</i>	117.62	ng/dL	60 - 200
TOTAL THYROXINE (T4) <i>Methodology: Chemiluminescence Immunoassay(CLIA)</i>	12.15	ug/dl	4.5 - 14.5
THYROID STIMULATING HORMONE (TSH) <i>Methodology: Chemiluminescence Immunoassay(CLIA)</i>	2.08	uIU/mL	0.35 - 5.50

Newborns: 0.70 - 15.2
*Paediatric:
2weeks-4 months :1.7-9.1
<12 months : 1.36 - 8.8
1- 6 years : 0.85 - 6.5
7-12 years : 0.28 - 4.3
Pregnancy:
1st Trimester: 0.1-2.5
2nd&3rd Trimester:0.2-3.0

Methodology: Chemiluminescence Immunoassay(CLIA)

Sample Type : serum

Interpretation Notes:

Note:

1. TSH levels are subject to circadian variation, reaching peak levels between 2-4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
2. Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically
3. Physiological rise in Total T3/T4 levels is seen in pregnancy and in patients on steroid therapy.

HAEMATOLOGY

HbA1c

Test Name	Obtained Value	Units	Bio. Ref. Intervals(Age/Gender specific)
GLYCOSYLATED HAEMOGLOBIN(HbA1c)	5.3	%	4.5 - 6.0 Good Control : 6.1-7.0 Fair Control : 7.1-9.0 Poor Control : >9.0

Methodology : HPLC

ESTIMATED AVERAGE GLUCOSE(eAG) 105.41

mg/dL

90 - 120 Excellent Control
121 - 150 Good Control
151 - 180 Average Control
181 - 210 Action Suggested
> 211 Panic Value

Methodology : Calculated

Sample Type : Whole Blood-EDTA

Interpretation Notes:

In vitro quantitative determination of HbA1c in whole blood is utilized in long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks), and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose. It is recommended that the determination of HbA1c be performed at intervals of 4-6 weeks during Diabetes Mellitus therapy. Results of HbA1c should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

Note: If variant hemoglobin is observed in HbA1c HPLC screen, HbA1c levels may not truly represent in vivo condition. In such condition HbA1c analysis by HPLC may not be the method of choice. You are advised to consult your referring physician and discuss the alternative tests as suggested below.

Advised:

1. To follow patient for glycemic control test like fructosamine or glycated albumin may be performed instead. 2. Hemoglobin HPLC screen to analyze abnormal hemoglobin variant.

estimated Average Glucose (eAG) :

estimated Average Glucose (eAG) based on value calculated according to National Glycohemoglobin Standardization Program (NGSP) criteria.

10D-180 (Near Nagar Nigam Office), Vasundhara, Ghaziabad, Phone: 0120-4127778, 9899004884, E-mail : premdharamhospital@gmail.com

Date	26/02/2024	Srl No.	24	Pt. Id.	PD/2602202423
Name	MR. KAUSHIK BHANU PRAKASH	Age	49 Yrs.	Sex	M
Ref. By	PREM DHARAM HOSPITAL				

WHOLE ABDOMEN MALE

Excessive bowel gases seen at present scan

Liver is normal in size, outline and echopattern. Vascular channels are clear. No evidence of I.H.B.D. Portal vein is normal in course and caliber. No focal SOL noted.

Gall Bladder is partially distended with normal wall thickness. Lumen is clear. CBD is normal. Spleen is normal in size (measures approximately 99.88 mm), shape and shows homogenous echotexture. No focal SOL noted.

Pancreas shows normal outline and echopattern. No focal SOL noted. Pancreatic duct is not dilated.

Retroperitoneum Obscured by bowel gases .

Right Kidney is normal in size (measures approximately 92.51X44.56 mm), outline and parenchymal echopattern. Cortico-medullary differentiation is well preserved. Pelvi-calyceal system is compact. No intra-renal calculus is seen.

Left Kidney is normal in size (measures approximately 97.80x55.75 mm), outline and parenchymal echopattern. Cortico-medullary differentiation is well preserved. Pelvi-calyceal system is compact. No intra-renal calculus is seen.

Urinary Bladder is partially distended and appears anechoic. The outline is smooth with mildly echogenic walls. The bladder wall thickness appears normal. There is no evidence of any debris or echogenic calculus in the bladder.

Prostate is normal in size(measuring approximately 28.4X43.5X33.5 mm) vol 21.67 cc, shows normal outline and echopattern. No focal SOL noted.

Bowel loops show no abnormal dilatation or bowel wall thickening.

No free fluid seen in visualized peritoneal or pleural cavity.

IMPRESSION:

USG WHOLE ABDOMEN REVEALS NO SIGNIFICANT SONOGRAPHIC ABNORMALITY.

Clinical and lab correlation is recommended for further evaluation.

Dr. NIDHI TYAGI
CONSULTANT RADIOLOGIST

- 3D/4D Ultrasound
- Whole Body Color Doppler
- Digital X-Ray (24 Hours)
- 2D Echocardiography
- ECG-3 Channel

FOR TELEPHONIC APPOINTMENT RADIOLOGY : 8287900395 (9 AM - 2:30 PM, 5:30 PM - 8:45 PM)

FOR ICU & AMBULANCE ENQUIRY : 8287900395

FOR OPD APPOINTMENT : 8287900395
