Importance of HbA1c - Glycated Hb. in Diabetes Mellitus

- HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose control (also called glycemc control)
- HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides amuch better indication of long term glycemc control than blood glucose determination
- HbA1c is formed by non-enzymatic reaction between glucose and Hb. , this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.
- Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.
- Glycemc control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).

SUMMARY OF 2D ECHO

LV is normal sized.

No RWMA at rest.

Overall LVEF – 60%.

Trivial Mitral Regurgitation.

No AS/AR.

Trivial Tricuspid Regurgitation.

RA/RV are normal sized. Good RV systolic function.

IVC – Collapsing.

IAS/IVS –Intact.

No PDA/Coarctation.

No e/o clot/vegetation on TTE.

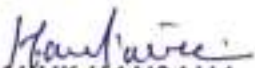

No Pericardial effusion.

FINAL IMPRESSION.

No Regional Wall motion abnormality.

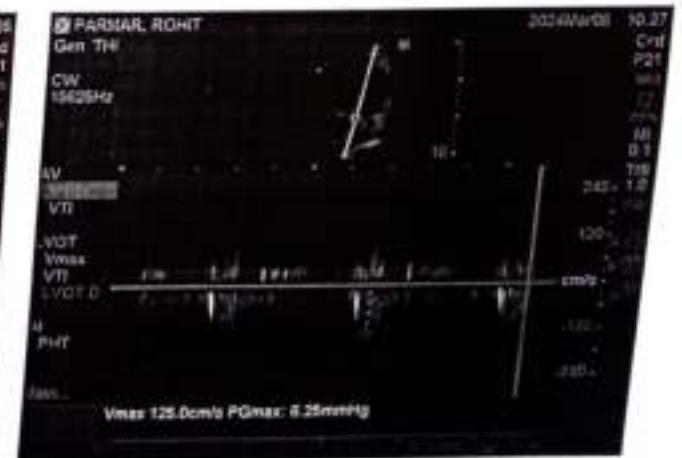

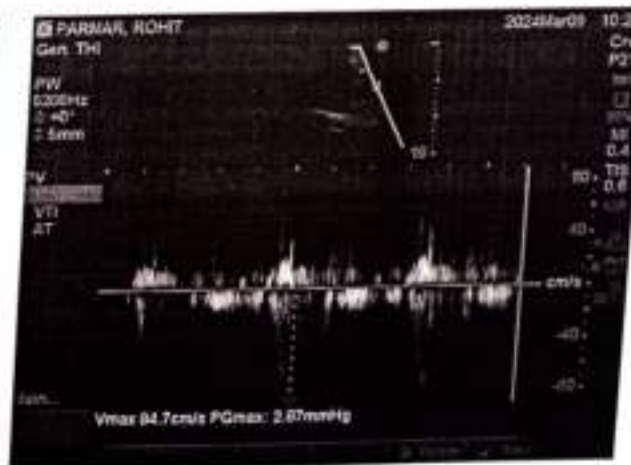

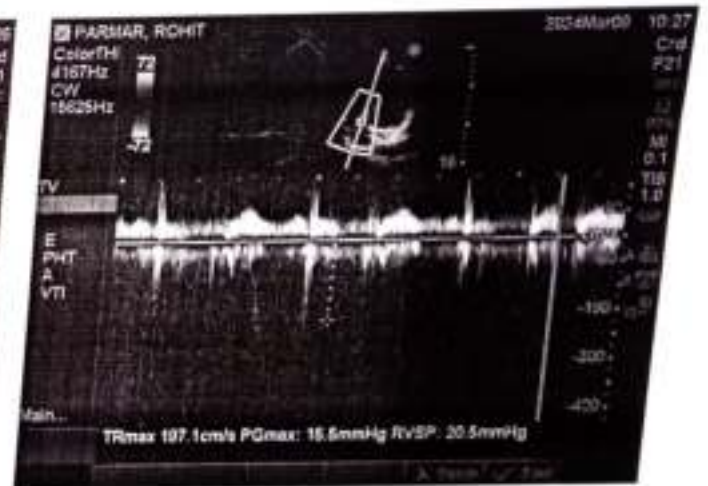

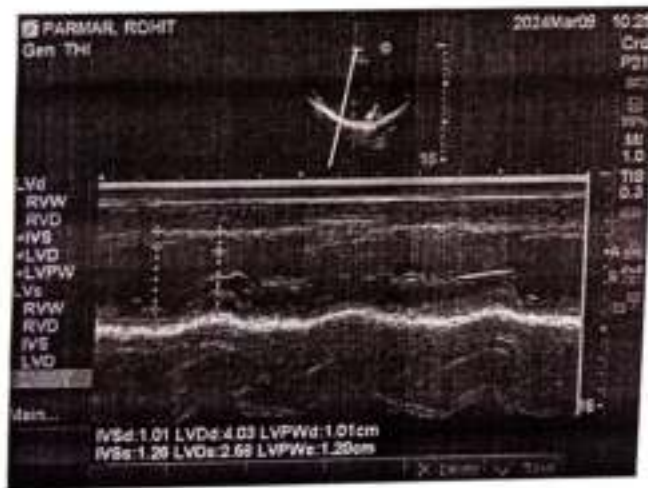

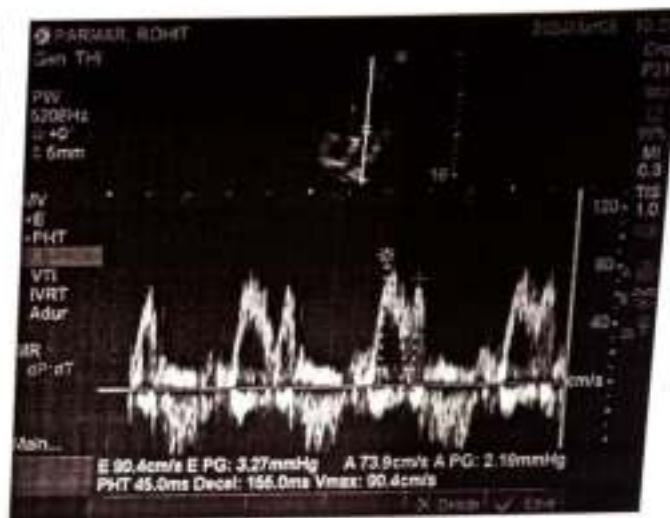

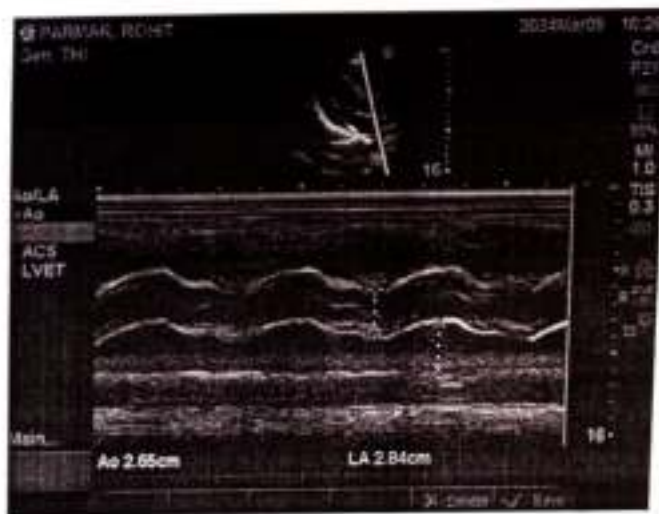

Normal LV Systolic function.

No PAH.
