This report is for perusal of the doctor only not the definitive diagnosis. Findings have to be clinically correlated. Ultrasound has its limitations in obese patients and in retroperitoneal organs. All congenital abnormalities cannot be detected on ultrasound. Sex of the fetus is not determined here. This report is not for medico-legal purposes.

* Only large obvious hypo/anechoic mass lesion can be diagnosed by USG. Mammography/breast MRI are much more sensitive and specific imaging modalities for evaluation of breast parenchyma & breast lesion. Advised further evaluation with these imaging modalities if clinically indicated/strong suspicion of breast lesion.

DEPARTMENT OF IMMUNOLOGY

Test Name	Result	Unit	Bio. Ref. Range	Method
THYROID PROFILE (TOTAL T3, TOTAL T4, TSH) , SERUM				
TRI-iodothyronine (T3, TOTAL)	1.34	ng/mL	0.6-1.81	CLIA
THYROXINE (T4, TOTAL)	12.80	µg/dL	3.2-12.6	CLIA
THYROID STIMULATING HORMONE (TSH)	2.210	µIU/mL	0.35-5.5	CLIA

Comment:

Serum TSH concentrations exhibit a diurnal variation with the peak occurring during the night and the nadir occurring between 10 a.m. and 4 p.m. In primary hypothyroidism, thyroid-stimulating hormone (TSH) levels will be elevated. In primary hyperthyroidism, TSH levels will be low. Elevated or low TSH in the context of normal free thyroxine is often referred to as subclinical hypo- or hyperthyroid-ism, respectively. Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.

Note:

For pregnant females	Bio Ref Range for TSH in uIU/ml (As per American Thyroid Association)
First trimester	0.1 - 2.5
Second trimester	0.2 - 3.0
Third trimester	0.3 - 3.0
