(THIS TEST IS PERFORMED BY THE NYCO CARD READER)Glycated Haemoglobin (HbA1c) is established indicator of long term blood glucose concentration in patients with diabetes mellitus.Although monitoring of glycated haemoglobin has been proposed as a diagnostic test,it dose not have any role in the diagnosis of diabetes mellitus.

Glycated haemoglobin should be monitored every 3 months in al insulin treated patients.more frequents monitoring (every 4 weeks) is suggested in clinical situation such as diabetes in pregnancy or major change in therapy.The interpretation of glycated haemoglobin depends on the red blood cell having a normal lifespan.The conditions altering red cell survival may effect HbA1c value.In such cases HbA1c values must be compared with previous values from same paients.
