## HEALTH ASSESSMENT FORM

### A - GENERAL EXAMINATION

CHIEF COMPLAINTS	- No complaints.				
PAST HISTORY	-				
MEDICAL HISTORY	Hypertension	Asthama	Heart Disease	Thyroid Disorder	Allergy
	NO.	NO.	NO.	NO.	NO.
	Diabetes	Stroke	Kidney Disorder	Tuberculosis	Liver Disorder
	NO.	NO.	NO.	NO.	NO.
	Other History	H/o vertigo.			

SURGICAL HISTORY	Piles	Fissures	Fistula	Hernia	Gall Bladder Stone
	NO.	NO.	NO.	NO.	NO.

CURRENT MEDICATIONS	Sr. No	Complaints	Dosage	Duration
		None		

NAME	Premod Prasad Jaiswal	Weight	72 kg
BP	110/70 mmHg	Height	170 cm
Pulse	64 bpm	SPO2	98% RA
Temperature	37.1	Peripheral Pulses	Present
Oedema	None	Breath Sound	
Heart Sound			
B - SYSTEMIC EXAMINATION			
FILL YES/NO			
CONSTITUTIONAL		GENITOURINARY SYSTEM	
Fever	NO	Frequency of urine	
Chills	NO	Blood in urine	
Recent weight gain		Incomplete empty of bladder	NO
EYES		OBS/GYNE.	
Eye pain		Abnormal bleed	
Spots before eyes	blur vision	Vaginal Discharge	PIA
Dry eyes	12 months	Irregular menses	
Wearing glasses		Midcycle bleeding	
Vision changes		MUSCULOSKELETAL	
Itchy eyes		Joint swelling	
EAR/NOSE/THROAT		Joint pain	NO
Earaches		Limb swelling	
Nose bleeds		Joint stiffness	
Sore throat	NO	INTEGUMENTARY(SKIN)	
Loss of hearing		Acne	
Sinus problems		Breast pain	Vitiligo
Dental problems		Change in mole	
CARDIOVASCULAR		Breast	
Chest pain		NEUROLOGICAL	
Heart rate is fast/slow	NO	Confused	
Palpitations		Sensation in limbs	NO
Leg swelling		Migraines	
RESPIRATORY		Difficulty walking	
Shortness of breath		PSYCHIATRIC	
Cough		Suicidal	
Orthopnoea	NO	Change in personality	
Wheezing		Anxiety	NO
Dyspnoea		Sleep Disturbances	
Respiratory distress in sleep		Depression	
GASTROINTESTINAL		Emotional	
Abdominal pain			
Constipation			
Heartburn			
Vomiting			
Diarrhoea			
Melena

Investigations	Observed Value	Bio. Ref. Interval	METHOD
<b><u>MEDIWHEEL FULL BODY HEALTH CHECKUP MALE ABOVE 40</u></b>			
ESR	19	< 20 mm at the end of 1Hr.	WESTERGREN
<b><u>INTERPRETATION</u></b> <b>ESR(Erythrocyte Sedimentation Rate)</b> -The ESR measures the time required for erythrocytes from a whole blood sample to settle to the bottom of a vertical tube. Factors influencing the ESR include red cell volume, surface area, density, aggregation, and surface charge. The ESR is a sensitive, but nonspecific test that is frequently the earliest indicator of disease. It often rises significantly in widespread inflammatory disorders due to infection or autoimmune mechanisms. Such elevations may be prolonged in localized inflammation and malignancies. Increased ESR: may indicate pregnancy, acute or chronic inflammation, tuberculosis, rheumatic fever, paraproteinemias, rheumatoid arthritis, some malignancies, or anemia. Decreased ESR: may indicate polycythemia, sickle cell anemia, hyperviscosity, or low plasma protein.

## REPORT

### Biochemistry

Test Name	Result	Unit	Biological Reference Interval
Corelation of A1C with average glucose			
A1C (%)	Mean Blood Glucose (mg/dl)		
6	126		
7	154		
8	183		
9	212		
10	240		
11	269		
12	298		

#### Interpretation :

- The HbA1c levels corelate with the mean glucose concentration prevailing in the course of Pts recent history (apprx 6-8 weeks) & therefore provides much more reliable information for glycemia control than the blood glucose or urinary glucose. This Methodology is better then the routine chromatographic methods & also for the daibetic pts.having HEMOGLBINOPATHIES OR UREMIA as Hb varaints and uremia does not INTERFERE with the results in this methodology.
- It is recommended that HbA1c levels be performed at 4 - 8 weeks during therapy in uncontrolled DM pts.& every 3 - 4 months in well controlled daibetics.
- Mean blood glucose (MBG) in first 30 days ( 0-30 )before sampling for HbA1c contributes 50% whereas MBG in 90 - 120 days contribute to 10% in final HbA1c levels

Test Name	Result	Unit	Biological Reference Interval
-----------	--------	------	-------------------------------

**1.Total T3( Total Tri- ido- thyronine )** is one of the bound form of thyroid hormones produced by thyroid gland.Its production is tightlyregulated by TRH( Thyrotropin Releasing Hormone) from hypothalamus and TSH (Thyroid stimulating hormone) from anterior pituitary gland.In euthyroid state,thyroid gland secretes 10- 15% of T3,which in circulation is heavily protein bound and is the principle bioactive form.T4 is converted to T3 by deiodinases in peripherally (Mainly Liver).and in target organs . Total T3 levels are increased in primary and central hyperthyroidism and T3 toxicosis& its levels are decreased in the primary and central hypothyroidism.but its normal in case of subclinical hypothyroidism and hyperthyroidism alterations in Total T 3 levels can also occur in conditions like Non -Thyroidal illness,pregnancy, certain drugs and genetic conditions.

**2.Total T4 (Total tetra- iodo-thyronine or total thyroxin)**is one of the bound form of thyroid hormones produced by thyroid gland .its production is tightly regulated TRH( Thyrotropin Releasing Hormone) from hypothalamus and TSH (Thyroid stimulating hormone) from anterior pituitary gland .In euthyroid state,thyroid gland secretes 85- 90% of Thyroxine,which is circulated is heavily protein bound and has more half life than T 3 .Total T4 levels are increased in primary and central hyperthyroidism and its levels are decreased in primary and central hypothyroidism but its normal in case of subclinical hypothyroidism and hyper thyrodism and T3 Toxicosis is alterations in Total T4 Levels can also occur in conditions like Non -Thyroidal illness, pregnancy,certain drugs and genetic conditionS.

**3.TSH (Thyroid stimulating hormone or Thyrotropin)**is produced by anterior pituitary in response to its stimulation by TRH (Thyrotropin releasing hormone ) released from hypothalamus .TSH and TRH releases are regulated by thyroid hormone through a feedback mechanism. There are several cases causes that can lead to thyroid gland dysfunction or dysregulation which eventually results in hypothyroidism or hypothyroidism based on the thyroid hormones and TSH levels it can be classified as subclinical primary or central apart from this certain other conditions can also lead to diagnostic confusions in the interpretation of a thyroid function test .They are pregnancy, Levothyroxine therapy certain other drug therapy assay interference alterations in the thyroid hormones binding proteins concentration and its binding capacity conditions of non-thyroidal illness and certain genetic conditions . TSH secretions exhibits diurnal pattern, so its advices able to check it during morning. Measurement of TSH alone may be misleading in conditions like recent treatment for thyrotoxicosis, TSH assay interference, central hypothyroidism. TSH Secreting pituitary adenoma,resistantance to thyroid hormone ,and disorders of thyroid hormones transport or metabolism.TSH receptor present in thyroid gland can be stimulated or inhibited by autoantibodies produced during autoimmune thyroid disorders which can lead to functional abnormalities of thyroid gland.The American Thyroid association determined that only TSH assays with third generation functional sensitivity (Sensitivity =0.01 mIU/L) are sufficient for use as screening tests for hypothyroidism their recommendation in consistent with the National Academy of Clinical Biochemistry Laboratory Medicine practice guideline for assessment of thyroid function.

## REPORT

### Immunology

Test Name	Result	Unit	Biological Reference Interval
Total PSA Method : ECLIA	0.573	ng/mL	0.03 - 3.5

#### Interpretation :

Serum PSA is a useful diagnostic tool for diagnosis of prostatic cancer. PSA levels should always be assessed in conjunction with the patient's medical history, clinical examination, prostatic acid phosphatase and radiological findings. Elevated levels are indicative of pathologic conditions of prostatitis, Benign hyperplasia or Prostatic adenocarcinoma. Rate of the fall of PSA levels to non detectable levels can occur following radiotherapy, hormonal therapy or radical surgical removal of the prostate & provides information of the success of treatment. Inflammation or trauma of prostate can lead to elevated PSA levels of varying magnitude and duration.

----- End of Report -----

### SONOGRAPHY OF ABDOMEN AND PELVIS

**TECHNIQUE:** Real time, B mode, gray scale sonography of the abdominal and pelvic organs was performed with convex transducer.

**LIVER:** The liver is normal in size, shape and has smooth margins. The hepatic parenchyma shows homogeneous echotexture without solid or cystic mass lesion or calcification. No evidence of intrahepatic biliary radical dilatation.

**PORTAL VEIN:** portal vein appears normal.

**GALL BLADDER:** The gall bladder is well distended. There is no evidence of calculus, wall thickening or pericholecystic collection.

**COMMON BILE DUCT:** The visualised common bile duct is normal in caliber. No evidence of calculus is seen in the common bile duct. Terminal common bile duct is obscured due to bowel gas artifacts.

**PANCREAS:** The head and part of body of pancreas is normal in size, shape, contours and echo texture. Rest of the pancreas is obscured due to bowel gas artifacts.

**SPLEEN:** The spleen is normal in size and shape. Its echotexture is homogeneous.

**KIDNEYS:**

Right kidney	Left kidney
11.8 x 5.3 cm	10.5 x 5.3 cm

The kidneys are normal in size and have smooth renal margins. Cortical echotexture is normal. The central echo complex does not show evidence of hydronephrosis. No evidence of hydroureter or calculi, bilaterally.

**URINARY BLADDER:** The urinary bladder is distended. It shows uniformly thin walls and sharp mucosa. No evidence of calculus is seen. No evidence of mass or diverticulum is noted. Pre void – 90 cc

.....Continue On Page 2

( MR. PRAMOD JAISWAL .....PG 2)

**PROSTATE:** Prostate is normal in size, measures 13 cc. The prostate gland shows well defined and smooth margins. The prostatic echotexture is normal and homogeneous.

There is no ascites. There is no obvious evidence of significant lymphadenopathy.

### IMPRESSION:

- No significant abnormality is seen.

## XRAY CHEST PA VIEW

Bilateral lung fields show no obvious parenchymal lesion.

Cardiac size is normal.

Hila are unremarkable.

Both domes of diaphragm are normal.

Both cardio phrenic and cost phrenic angles are normal.

Bony thoracic cage appears normal.

*Please correlate clinically.*
