Mumbai400021

Dear Sir,

Tie-up arrangement for Health Checkup under Health Checkup 40-50 Male

Shri/Smt./Kum. JITENDER VIJ.,

P.F. No. 657316 Designation : CustomerService Associate(CSA)

Checkup for Financial Year 2024-2025 Approved Charges Rs. 3500.00

The above mentioned staff member of our Branch/Office desires to undergo Health Checkup at your Hospital/Centre/Clinic, under the tie-up arrangement entered into with you, by our bank.

Please send the receipt of the above payment and the relevant reports to our above address.

Thanking you,

(Signature of the Employee)

Yours Faithfully,

BRANCH MANAGER/SENIOR MANAGER

ULTRASOUND

Liver is normal in size ~12.4 cm and show raised echotexture. There is no focal hepatic lesion present. CBD is normal in course & caliber at porta hepatis. There is no calculus defined in the CBD. Intra hepatic biliary radicals are normal.

Gallbladder is partially distended. No calculus seen in lumen.

Pancreas is normal in size & echopattern.

Spleen is normal in morphology and echotexture.

Both kidneys are normal in shape size contour & show normal echotexture with well maintained CMD. There is no hydronephrosis defined. Both ureters are obscured by bowel gas. **Few calculi is seen (2 in number) of size ~4 mm is seen at upper pole right kidney.**

Bladder is minimally distended .No mass is defined in bladder.

Prostate appears normal & prostatic volume ~ 15 cc.

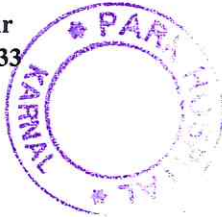

There is no free fluid present in the abdomen.

Impression: Imaging features are suggestive of-

Grade 1 fatty liver

Non obstructive Right renal calculi

Lab No.	012406230196	Age/Gender	42 YRS/MALE	Coll. On	23/Jun/2024 09:05AM
Name	Mr. JITENDER VIJ	BarcodeNo	01230196	Reg. On	23/Jun/2024
Ref. Dr.				Approved On	23/Jun/2024 10:48AM
Rpt. Centre	HEALPLUS LABS PRIVATE LIMITED			Printed On	24/Jun/2024 05:32PM

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

HbA1c (Glycosylated haemoglobin), EDTA whole blood	8.40	%	< 5.7
<i>Method : HPLC</i>			
Estimated average plasma Glucose	194.38	mg/dL	65 - 136
<i>Method : Calculated</i>			

The test is approved by NGSP for patient sample testing.

Interpretation:

Metabolically normal patients	%	< 5.7
Pre-diabetic	%	5.7 - 6.4
Diabetic	%	> 6.4

Glycosylated hemoglobin or HbA1C is a reliable indicator of mean plasma glucose levels for a period of 8-12 weeks preceding the date on which the test is performed and is a more reliable indicator of overall blood sugar control in known diabetic patients than blood sugar levels. A value of less than 5.7 % is usually seen in metabolically normal patients, however diabetics with very good control can also yield similar values. The HbA1c test, thus can not be used to differentiate between diabetic patients with very good control over the plasma glucose levels from metabolically normal, non-diabetic subjects as both groups may reveal very similar values in the assay.

Ref. Dr.				Approved On	23/Jun/2024 10:48AM
Rpt. Centre	HEALPLUS LABS PRIVATE LIMITED			Printed On	24/Jun/2024 05:32PM

Test Name	Value	Unit	Biological Reference Interval
-----------	-------	------	-------------------------------

TSH (Thyroid Stimulating Hormone), serum	2.78	uIU/ml	0.27 - 4.2
---	------	--------	------------

Method : ECLIA

Interpretation:

1. Primary hyperthyroidism is accompanied by elevated serum FT3 and FT4 values alongwith depressed TSH levels.
2. Primary hypothyroidism is accompanied by depressed serum FT3 and FT4 values and elevated serum TSH levels.
3. High FT3 levels accompanied by normal FT4 levels and depressed TSH levels may be seen in T3 toxicosis.
4. Central hypothyroidism occurs due to pituitary or thalamic malfunction (secondary and tertiary hypothyroidism respectively). This relatively rare but important condition is indicated by presence of low serum FT3 and FT4 levels, in conjunction with TSH levels that are paradoxically either low/normal or are not elevated to levels that are expected.

The following ranges are recommended for pregnant females:

First trimester	uIU/ml	0.1 - 2.5
Second trimester	uIU/ml	0.2 - 3.0
Third trimester	uIU/ml	0.3 - 3.0

PSA Total, serum	0.38	ng/mL	0 - 2.0
-------------------------	------	-------	---------

Method : ECLIA

Interpretation:

Prostate-specific antigen (PSA) is a glycoprotein that is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels.

In patients with previously diagnosed prostate cancer, PSA testing is advocated as an early indicator of tumor recurrence and as an indicator of response to therapy. The test is also useful for initial screening for prostate cancer:

Total PSA levels < 2 ng/ml almost rule out the possibility of prostatic malignancy.

Total PSA levels between 2 and 10 ng/ml lie in the grey zone. Such values may be obtained in prostatitis, benign hyperplasia and malignancy. Further testing including a free PSA/PSA ratio and prostate biopsy is recommended for these patients for confirmation of the diagnosis.

Total PSA values >10 ng/ml are highly suspicious for prostate cancer but further testing, such as prostate biopsy, is needed to diagnose the exact pathology.

*Disclaimer: This is an electronically validated report. If any discrepancy is found, it should be confirmed by the user.
