MAMMOGRAPHY

H/O operated case of CA right breast (lumpectomy done).

Bilateral mammograms have been obtained a low radiation dose film screen technique in the cranio-caudal and oblique projections. Film markers are in the axillary / lateral portions of the breasts.

Bilateral breast density ACR CATEGORY II

No evidence of focal asymmetric density / spiculated high density mass lesion / retraction/clusters of microcalcification is seen.

No abnormal skin thickening is seen.

Sonomammography of both breasts show normal parenchymal echotexture.

A well defined oval hypoechoic lesion measuring 11.3 x 9.6 x 6.4mm is seen at 3 O'clock position in the left breast. It has smooth margins. It is wider than taller. No evidence of any calcification, cystic component or abnormal vascularity seen within this lesion. Findings are suggestive of fibroadenoma.

A well defined rounded anechoic lesion measuring 7.7 x 5.3mm is seen at 3 O'clock position in the left breast. It has smooth margins. No evidence of any solid component, calcification or abnormal vascularity within this lesion. This is suggestive of simple cyst.

A well defined oval hypoechoic lesion measuring 8.2 x 6.2mm with central hyperechoic area is seen in the left breast at 4 o'clock position. It has smooth margins. No evidence of any calcification, cystic component or abnormal vascularity within this lesion. Findings could be suggestive of ? Intraparenchymal lymph node / ? Fibroadenoma.

No significant axillary lymphadenopathy is seen.

IMPRESSION:

Fibroadenoma in the left breast as described above.

Simple cyst in the left breast as described above.

Well defined oval hypoechoic lesion in the left breast as described above suggestive of ? Intraparenchymal lymph node / ? Fibroadenoma.

Normal mammography and Sonomammography of the right breast.

LEFT BREAST - BIRADS CATEGORY II

Suggest: Follow up mammography after one year is suggested.
Please bring all the films for comparison.

ACR BIRADS CATEGORY

[American college of radiology breast imaging reporting and data system].

- I Negative
- II Benign finding
- III Probably benign finding.
- IV Suspicious (Indeterminate).
- V Highly suggestive of malignancy.

Investigations have their limitations. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. Please interpret accordingly.
