HEMOGLOBIN A1c TEST

Test	Observed Value	Unit	Biological Reference Interval
HbA1c	4.7	%	> 8 : Action Suggested 7-8 : Good control < 7 : Goal 6.2-7 : Near Normal Glycemia < 6.2 : Non-diabetic Level
Mean Blood Glucose	88.2	mg/dL	70.0 - 140.0

Importance of HbA1c - Glycated Hb. in Diabetes Mellitus

- HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose control (also called glycemic control)
- HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides a much better indication of long term glycemic control than blood glucose determination
- HbA1c is formed by non-enzymatic reaction between glucose and Hb. , this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.
- Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.
- Glycemic control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).

Thyroid Function Test

Test	Result	Unit	Biological Ref. Interval
T3 - Triiodothyronine <i>Chemiluminescence</i>	0.91	ng/mL	0.58 - 1.59
T4 - Thyroxine <i>Chemiluminescence</i>	8.12	micro g/dL	4.87 - 11.72
TSH - Thyroid Stimulating Hormone <i>Chemiluminescence</i>	2.0297	microIU/mL	0.35 - 4.94

Remarks: Collected Sample Received

Interpretation

TSH	T3/FT3	T4/FT4	Suggested Interpretation for the Thyroid Function Tests Pattern
Within Range	Decreased	Within Range	Isolated low T3 often seen in elderly & associated Non-Thyroid illness. In elderly the drop in T3 level can be up to 25%
Raised	Within Range	Within Range	<ul style="list-style-type: none"> Isolated High TSH Especially in the range of 4.7 to 15 mIU/ml is commonly associated with physiological & Biological TSH Variability. Subclinical Autoimmune Hypothyroidism. Intermediate T4 therapy for hypothyroidism. Recovery phase after Non-Thyroidal illness.
Raised	Decreased	Decreased	<ul style="list-style-type: none"> Chronic Autoimmune Thyroiditis. Post thyroidectomy, post radioiodine. Hypothyroid phase of transient thyroiditis.
Raised or Within Range	Raised	Raised or Within Range	<ul style="list-style-type: none"> Interfering antibodies to thyroid hormones (anti-TPO antibodies) Intermediate T4 therapy of T4 overdose. Drug Interference-Amiodarone, Heparin, Beta blocker, steroids, anti-epileptics.
Decreased	Raised or Within Range	Raised or Within Range	<ul style="list-style-type: none"> Isolated Low TSH – Especially in the range of 0.1 to 0.4 often seen in elderly & associated with Non-Thyroidal illness. Subclinical Hypothyroidism. Thyroxine ingestion.
Decreased	Decreased	Decreased	<ul style="list-style-type: none"> Central Hypothyroidism. Non-Thyroidal illness. Recent treatment for Hypothyroidism (TSH remains suppressed)
Decreased	Raised	Raised	<ul style="list-style-type: none"> Primary Hyperthyroidism (Graves' disease), Multinodular goitre Toxic nodule. Transient thyroiditis: postpartum, Silent(lymphocytic), Post viral (granulomatous, subacute, DeQuervain'a) Gestational thyrotoxicosis hyperemesis gravidarum.
Decreased or Within Range	Raised	Within Range	<ul style="list-style-type: none"> T3 toxicosis. Non-Thyroidal illness.

LABORATORY TEST REPORT

Patient Information	Sample Information	Client/Location Information
Name : Mr Amrendra Kishor	Lab Id : 082315301343	Client Name : Spectra Diagnostics Lab@Adajan
Sex/Age : Male / 48 Y	Registration on : 19-Aug-2023 10:59	Location :
Ref. Id :	Collected at : non SAWPL	Approved on : 19-Aug-2023 12:26 Status : Final
Ref. By :	Collected on : 19-Aug-2023 10:59	Printed On : 19-Aug-2023 12:36
	Sample Type : Serum	Process At : 153. Lab SAWPL Gujarat Surat Adajan

Immunoassay

Test	Result	Unit	Biological Ref. Interval
PSA-Prostate Specific Antigen, Total <i>Chemiluminescence</i>	0.785	ng/mL	0 - 4

PSA is a glycoprotein that is expressed by both normal and neoplastic prostate tissue and is prostate tissue specific and not prostate cancer specific. PSA is constantly expressed in nearly all prostate cancers, although its level of expression on a percell basis is lower than in normal prostate epithelium. The absolute value of serum PSA is useful for determining the extent of prostate cancer and assessing the response to prostate cancer treatment; its use as a screening method to detect prostate cancer is also common.

Interpretation

Increased in

- Prostate disease (Cancer, Prostatitis, Benign prostatic hyperplasia, Acute urinary retention)
- Manipulations (Cystoscopy, Needle biopsy, Radiation therapy, Indwelling catheter, Prostatic massage)
- Transurethral resection
- Prostatic ischemia

Decreased in

- Castration
- Prostatectomy
- Radiation therapy
- Ejaculation with 24 - 48 hours
- 5-alpha-reductase inhibitor reduces PSA by 50% after 6 months in men without cancer

Limitations

- PSA has been recommended by the American Cancer Society for use in conjunction with a DRE for early detection of prostate cancer starting at the age of 50 years for men with at least 10 year life expectancy
- PSA levels that are measured repeatedly over time may vary because of biologic variability where the true PSA level in a given man is different on different measurements.
- A change in PSA of >30% in man with a PSA initially below 2.0 ng/mL was likely to indicate a true change beyond normal random variation.
