**DEPARTMENT OF BIOCHEMISTRY**

Test Description	Observed Value	Unit	Method	Biological Ref. Interval
HbA1c(Glycated Haemoglobin)	4.6*	%	HPLC	Non diabetic level <=5.6 Risk of diabetes 5.7 - 6.4 Diabetes >= 6.5

**REMARKS**

*In vitro* quantitative determination of **HbA1c** in whole blood is utilized in long term monitoring of glycemia. The **HbA1c** level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose. It is recommended that the determination of **HbA1c** be performed at intervals of 4-6 weeks during Diabetes Mellitus therapy. Results of **HbA1c** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

**Mean Plasma Glucose** 85.32 mg/dl

Mean Plasma Glucose is based on estimated Average Glucose (eAG) value calculated according to National Glycohemoglobin Standardization Program (NGSP) criteria.

Reference Range (HBA1c) :	Reference Range (Average Blood Sugar):	
Non diabetic level : <=5.6 %	Excellent control : 90 - 120 mg/dl	Action suggested : 181 - 210 mg/dl
Risk of diabetes : 5.7 - 6.4 %	Good control : 121 - 150 mg/dl	Panic value : > 211 mg/dl
Diabetes : >= 6.5 %	Average control : 151 - 180 mg/dl	

**Note:** Average blood sugar values is calculated from hba1c value and it indicates average blood sugar level over past three months.

**Disclaimer:** The test result mentioned here should be interpreted in view of clinical condition of the patient. In case of any clinical suspicion regarding any parameter, repeat t with fresh sample essential to conclude.
