## THYROID PROFILE

Test Name	Patient Value	Reference Range	Unit
T3	110.3	60.0 - 181.0	ng/dl
T4	7.20	3.20 - 12.6	ng/dl
TSH	1.09	0.35 - 5.50	μIU/ml

### Interpretation(s)

TSH stimulates the production and secretion of the metabolically active thyroid hormones, thyroxine (T4) and triiodothyronine (T3) by interacting with a specific receptor on the thyroid cell surface. The synthesis and secretion of TSH is stimulated by Thyrotropin releasing hormone (TRH), the hypothalamic tripeptide, in response to low levels of circulating thyroid hormones. Elevated levels of T3 and T4 suppress the production of TSH via a classic negative feedback mechanism. Failure at any level of regulation of the hypothalamic-pituitary-thyroid axis will result in either underproduction (hypothyroidism) or overproduction (hyperthyroidism) of T4 and/or T3.

Clinical Condition T3 Levels T4 Levels TSH level

Primary hypothyroidism Reduced Reduced Increased (Significantly)  
Subclinical Hypothyroidism Normal Normal or Low Normal High  
Primary hyperthyroidism Increased Increased Reduced
