HAEMATOLOGY EXAMINATION

Investigation Name	Result	Reference Range
GLYCOCYLATED HAEMOGLOBIN (HbA1c)	7.23 %	Normal < 8.0 % Good Control : 8.0 – 9.0 % Fair Control : 9.0 – 10.0 % Poor Control : > 10.0 %

INTERPRETATION :

HbA1c is an indicator of glycaemic control. HbA1c has been thought to represent average glycaemia over the past 6-8 wks. A pt. in stable control will have 50 % of their HbA1c formed in the month before sampling, 25 % is in the month before that & the remaining 25 % in the month 2-4.

LEVEL OF HbA1c : < 5.3 % :- may represent an acute & chronic possibility for severe hypoglycaemia events < 5.4-5.7 % :- Represents a very good level of diabetic control (caution should be used to avoid hypoglycaemia). 5.8-7.2 % :- Represents a good level of diabetes control (continue to monitor frequently and strive for a reduction of HbA1c level to between 5.8 - 7.0) .- 8.0 % :- Represents a fair level of diabetes control (Suggest physician / / patient / evaluation to determine where improvement can be made. >8.0 % :- Represents a sub-optimal level of diabetic control. (This level represents a significant increase in the risk for developing possible chronic complications). Effective intervention is strongly suggested, along with specific diagnostic tests.
