Subj: - Declaration for Steel Examination (Submission of Sample)

Dear Sir,

With due respect I beg to say that while
undergoing the medical check-up facility availed
I have decided for steel sample test at my own
decision on account of timing at 10.00 am.

Kindly consider it favourably.

Regards.

ARUN KUMAR

Pres Doctor: :

DEPARTMENT OF LABORATORY MEDICINE

TEST NAME	RESULT	BIOLOGICAL REFERENCE INTERVALS	UNITS
PSA TOTAL			
PSA TOTAL Method: Immunofluorescence	0.38	0.0 - 4.0	ng/mL

Interpretation :

Serum prostate specific antigen (PSA) concentrations are elevated above 4.0 ng/ml in 28% of men with benign prostatic hyperplasia, 58% of men with organ confined prostate cancer and 80% of men with extensive prostate cancer, but in less than 8% of normal healthy men over 50 yrs of age. After radical prostatectomy, serum PSA levels are (< 0.2 ng/ml), 93% of patients with undetectable serum PSA concentrations have no clinical tumour recurrence.

Free PSA as a percent of Total PSA

Probability of carcinoma prostate when Total PSA is 4.1 - 10 ng / ml

- >	26	8 %
20 -	25	16 %
15 -	20	20 %
10 -	15	28 %
0 -	0 -	56 %

Comments:-

- 1 False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy.
- 2 PSA total and free levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies and nonspecific protein binding.
- 3 Results obtained with different assay kits cannot be used interchangeably.
- 4 All results should be correlated with clinical findings and results of other investigations.
