erpretation: Ultra sensitive-thyroid±stimulating hormone (TSH) is a highly effective screening assay for thyroid disorders. In patients an intact pituitary-thyroid axis, sTSH provides a physiologic indicator of the functional level of thyroid hormone activity. Increased s-H indicates inadequate thyroid hormone, and suppressed s-TSH indicates excess thyroid hormone. Transient s-TSH abnormalities ly be found in seriously ill, hospitalized patients, so this is not the ideal

tting to assess thyroid function. However, even in these patients, s-TSH works better than total thyroxine (an alternative screening st). when the s-TSH result is abnormal, appropriate follow-up tests T4 & free T3 levels should be performed. If TSH is between 5.0 to

en it is considered as subclinical hypothyroidism which should be followed up after 4 weeks & If TSH is > 10 & free T4 & free T3 level

e normal then it is considered as overt hypothyroidism.

erum triiodothyronine (T3) levels often are depressed in sick and hospitalized patients, caused in part by the biochemical shift to the roduction of reverse T3. Therefore, T3 generally is not a reliable predictor of hypothyroidism. However, in a small subset of yperthyroid patients, hyperthyroidism may be caused by overproduction of T3 (T3 toxicosis). To help diagnose and monitor this ubgroup, T3 is measured on all specimens with suppressed s-TSH and normal FT4 concentrations.

Normal ranges of TSH & thyroid hormons vary according trimesper in pregnancy. TSH ref range in Pregnacy Reference range (microIU/ml)

First triemester 0.24 - 2.00

Second triemester 0.43-2.2

USG - WHOLE ABDOMEN

Liver is normal in size (14 cm) and shape. Its echogenicity is normal. Margins are smooth and regular. The portal vein and biliary radicals are normal in calibre.

GB is well distended. Wall thickness is normal with echofree lumen. CBD is within normal limits.

Pancreas is normal in size, shape and echo pattern.

Bilateral kidneys are normal in shape, size and echotexture. Corticomedullary differentiation is maintained. No evidence of any calculus or hydronephrosis.

Rt. Kidney Length: 9.4 cm Lt. Kidney Length: 9.8 cm

Spleen is normal in size and echopattern.

Urinary bladder is normal in shape and size. Lumen appears echofree. Wall thickness is normal.

Prostate is normal in size. Echotexture is homogenous. Capsule is intact.

No evidence of ascites / pleural effusion. Visualized bowel loops are normal in course and calibre.

IMPRESSION:-

No significant abnormality detected.
