Immunology and Serology

Prostate Specific Antigen(PSA), Total, Serum

Method: ECLIA

Machine Name: VITROS ECI

Prostate Specific Antigen(PSA), Total, Serum 0.12

ng/ml 0.0-4.0

Border line 4.0 - 10.0

THYROID PROFILE, TOTAL, SERUM

Method: ECLIA

Machine Name: Vitros ECI

T3, Total 1.77

ng/ml 0.8-2.0

T4, Total 10.1

µg/dL 5.10-14.10

TSH (Ultrasensitive) 1.63

mIU/mL 0.27-4.2

Interpretation:

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%. Hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction (Free T4 / Free T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
