 Patient ID / UHID : 7746216/OF7746216
 Referred By : Dr. Dr.self
 Sample Type : Whole blood EDTA
 Sample Collected : Mar 28, 2024, 01:15 PM
 Report Date : Mar 28, 2024, 07:30 PM
 Barcode No : HY361648
 Report Status : Final Report

| Test Description | Value(s) | Unit(s) | Reference Range |
|------------------|----------|---------|-----------------|
|------------------|----------|---------|-----------------|

HbA1C (Glycosylated Haemoglobin)

| | | | |
|---|--------|-------|-------------------|
| Glycosylated Hemoglobin (HbA1c) HPLC | 5.7 | % | < 5.7 |
| Estimated Average Glucose | 116.89 | mg/dL | Refer Table Below |

Interpretation:

Interpretation For HbA1c% As per American Diabetes Association (ADA)

| Reference Group | HbA1c in % |
|--|---|
| Non diabetic adults >=18 years | <5.7 |
| At risk (Prediabetes) | 5.7 - 6.4 |
| Diagnosing Diabetes | >= 6.5 |
| Therapeutic goals for glycemic control | Age > 19 years Goal of therapy: < 7.0 Age < 19 years Goal of therapy: <7.5 |

Note:

- Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
- Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate

Comments :

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

| HbA1c(%) | Mean Plasma Glucose (mg/dL) | HbA1c(%) | Mean Plasma Glucose (mg/dL) |
|----------|-----------------------------|----------|-----------------------------|
| 6 | 126 | 12 | 298 |
| 8 | 183 | 14 | 355 |
| 10 | 240 | 16 | 413 |

CYTOLOGY

PAP SMEAR

CYTOPATHOLOGY REPORT
2001 BETHESDA SYSTEM

SPECIMEN: CERVICOVAGINAL SMEAR.

SPECIMEN ADEQUENCY:

Smear is satisfactory for evaluation. Smear shows both squamous cells and endocervical cells. Background shows shift in flora with moderate severe neutrophilic infiltrate.

INTERPRETATION:

Negative for intra-epithelial lesion and malignancy .

IMPRESSION:

Shift in flora suggestive of bacterial vaginosis.

DISCLAIMER:

It is a screening procedure subject to both false negative or false Positive.
Result must be interpreted in context of historic and current Clinical information
in case of any mismatch biopsy and HPE may be considered.

US examination of both breasts was performed using a high frequency probe.

On US both breasts show the normal appearances of adult breasts.
Normal echogenic adipose tissue is seen. The glandular elements are normal.
The fibrous tissue stroma is well defined.
No evidence of any SOL or abnormal calcification seen.
No evidence of any abscess seen.
Areolar and axillary regions are normal.

NORMAL STUDY.

Regards.
