Interpretation

The patient exercised according to the Bruce protocol for 5 m 8 s achieving a work level of Max. METS - 10.20. Resting heart rate initially 94 bpm, rose to a max. heart rate of 173 (55% of Pr.MHR) bpm. Resting blood Pressure 110 / 80 mmHg, rose to a maximum blood pressure of 150 / 100 mmHg. No significant ST-T changes. TMT negative for inducible ischemia for the workload achieved.

Dr. Brinaani Singh

CONDITIONS OF REPORTING

SEA BIRD MEDICARE CENTRE (DIVISION OF SEA BIRD MEDICARE PVT LTD)

1. Individual Laboratory Investigation should not be considered as conclusive and should be used along with other relevant clinical instrumentation to achieve the final diagnosis. The reported results are for the information of the referring doctors only.
2. The test results relate only to the items/items in our laboratory.
3. The values of a laboratory investigation are dependent on the quality of sample as well as the assay procedure used.
4. For test performed on specimens received from other locations (within and outside Mumbai), it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen(s).
5. Electronic images in the report are created by electronic processing. Sea Bird Medicare Centre makes no expressed or implied warranties or representations with respects to it and takes no responsibility for the authenticity, quality and size of the image, affected possibly due to a computer virus or other contamination.
6. Sea Bird Medicare centre confirms that all tests have been carried out with reasonable care, clinical safety and technical integrity.
 - A. However due to certain factors such as reagent inconsistency, machine breakdown etc. beyond its control which could affect the testing, it does not make any representation or give any warranty about the accuracy of the reported results.
 - B. The test results are to be used for help in diagnosing/treating medical disease & not for forensic applications. Hence these results cannot be used for medico-legal purpose.
7. Since Sea Bird Medicare Centre does not verify the identity or the details of the customer except in case of certain tests, it cannot be held responsible for any misrepresentation or misuse.
8. Partial reproduction of this report is not valid and should not be resorted to.
9. Any query from referring doctor pertaining to this report should be directed to Sea Bird Medicare Centre.
10. All dispute / claims concerning to this report are subject to Mumbai jurisdiction only.

REPORT

Complete Blood Count

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
Monocytes	05	%	2 - 10
Basophils	00	%	0 - 1
Platelet Count	218000	count	150000 - 450000
WBC Morphology	Predominantly Normocyte and Normochromic.		
RBC Morphology	Normal Morphology		
Platelets on smear	Adequate on smear		

SEITA Whole Blood - Fully flow Automated Three part cell counter (CBC, WBC, Platelet count by impedance, Hemoglobin by colorimetry) Coulter flow method. Results calculated (parameters, Morphology and DLC's done manually by the Pathologist.)

REPORT

Glycosylated Haemoglobin (HbA1c)

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
HbA1c	5.33	%	4 - 5.65
Pre-Diabetic - 5.7 - 6.4 %			
Diabetic - ≥ 6.5 %			
(ICCV-4 Whole Blood, Turbidimetric)			
Mean Blood Glucose (MBG)	114.58	mg/dl	

Interpretation & Remarks:

- HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (EAG).
- HbA1c has been endorsed by clinical groups & ADA (American Diabetes Association) guideline, 2022, for diagnosis of diabetes using a cut-off point of 6.5 %.
- Levels of HbA1c are a better indicator of diabetic control than a solitary test.
- Low glycosylated haemoglobin (below 4%) in a non-diabetic individual are often associated with systemic inflammatory diseases, chronic anaemia, especially severe iron deficiency & haemolysis, chronic renal failure and liver diseases. Clinical correlation suggested.
- To estimate the MBG from the HbA1c value, the following equation is used: $\text{MBG} = 108 + 2.12 \times \text{HbA1c} \%$
- Measurement of Hemoglobinopathies is HbA for estimation.
 - For HbA < 2%, an alternate platform (Preanalytical) is recommended for testing of HbA1c.
 - Hemoglobin hemoglobinopathy is detected. Preanalytical is recommended for monitoring diabetic status.
 - Hemoglobin not detected.
- In insulin-treated diabetic patients, following values can be considered as a guide for monitoring the glycaemic control.
 - Excellent Control - 6 to 7 %
 - Fair to Good Control - 7 to 8 %
 - Unsatisfactory Control - 9 to 10 %
 - and Poor Control - More than 10 %
- Test done on M8000 Cartridge Based Specific Protein Analyser.

LIPID PROFILE

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
LDLCHOLC Form Calculator	1.38		Acceptable for Males : < 3.60 Acceptable for Females : < 3.20

NOTE:

- Biological Reference Intervals are as per IFTM, NCEP Guidelines and National Lipid Association (NLA) 2014 Recommendations.
- Test is done on Fully Automated Blood COAG AND PLASMA Biochemistry Analyser.
- The LDL Cholesterol is calculated by the Friedewald equation which provides a reliable LDL Cholesterol value estimate when triglyceride levels are below 500 mg/dL. A direct measurement is advised if the triglyceride levels are >500mg/dL.

REPORT

THYROID FUNCTION TEST

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
TSH	4.38	µU/ml	0.25-5 µU/ml
T3	2.07	nmol/l	1.52-2.33 nmol/l
T4	85.91	nmol/l	60-120 nmol/l

The assay principle involves an enzyme immunoassay (competitive method) with a fixed fluorescent detection (ELFA).

INTERPRETATION

TSH: A high TSH result often means an under active thyroid gland that is not responding adequately to the stimulation of TSH due to some form of disease.

Primary thyroid dysfunction: A high TSH value can also occur when someone with a normal thyroid function or who has had their thyroid gland removed is receiving too little thyroid hormone replacement. A low TSH result can indicate an over active thyroid gland (hyperthyroidism) or excessive amounts of thyroid hormone replacement in those who are being treated for an under active (or removed) thyroid gland. An abnormal TSH test result usually allows for

additional testing to investigate the cause of the increase or decrease.

T3: Thyrotoxic periodic paralysis (TPP) contributes significantly to the maintenance of the electrolyte state, and the total T3 concentration has a role in screening for thyroid disease.

In conjunction with other tests, T3 alone cannot diagnose hyperthyroidism, but it may be more sensitive than thyroxine (T4) for hyperthyroidism.

T4: Thyroxine accounts for at least 80% of circulating protein-bound iodine. While 98.9% of T4 is protein bound, primarily to thyroxine-binding globulin (TBG), it is the free fraction that is biologically active. In most patients the total T4 level is a good indicator of thyroid status, however it can sometimes be misleading, and

diagnostic efficiency may be improved by use of a total T4 test in conjunction with other tests.

Diagnosis requires the use of at least 80% of circulating protein-bound iodine. While 98.9% of T4 is protein bound, primarily to thyroxine-binding globulin (TBG), it is the free fraction that is biologically active. In most patients the total T4 level is a good indicator of thyroid status, however it can sometimes be misleading, and

diagnostic efficiency may be improved by use of a total T4 test in conjunction with other tests.
