ABO blood group system is determined by antigens and antibodies present in the blood. Antigens are protein molecules found on the surface of red blood cells. Antibodies are found in plasma. In determining blood group, the cells are mixed with different antibody solutions to give A, B, O or AB.

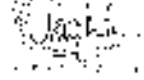

Disclaimer: Please note, as the results of previous ABO and Rh group (Blood Group) for present sample are not available, please check with the patient records for availability of the same.

The test is performed by both forward as well as reverse grouping available.
