URINE COTININE EXAMINATION

INVESTIGATION	RESULTS	NORMAL RANGE
URINE COTININE	NEGATIVE	BY CARD METHOD

Immunochromatographic assay for Qualitative detection of cotinine in urine. A positive result indicates only that the presence of cotinine is above cut off concentration. It doesn't indicate or measure level of consumption. It is possible that technical procedure as well as other interfering substances in the specimen may cause erroneous results.

Interpretation of result:

Negative - Urine cotinine level below 200 ng/ml

Positive - Urine cotinine level above 200 ng/ml
