**THYROID PROFILE**

Test Name	Patient Value	Reference Range	Unit
T3	1.10	0.58 - 1.59	nmo
T4	6.20	4.87 - 11.92	nmo
TSH	1.00	0.27 - 4.20	uIU/ml

Interpretation(s)  
 TSH stimulates the production and secretion of the metabolically active thyroid hormones, thyroxine (T4) and triiodothyronine (T3) by interacting with a specific receptor on the thyroid cell surface. The synthesis and secretion of TSH is stimulated by Thyrotropin releasing hormone (TRH), the hypothalamic tripeptide, in response to low levels of circulating thyroid hormones. Elevated levels of T3 and T4 suppress the production of TSH a classic negative feedback mechanism. Failure at any level of regulation of the hypothalamic-pituitary-thyroid axis will result in either underproduction (hypothyroidism) or overproduction (hyperthyroidism) of T4 and /or T3.

Clinical Condition	T3 Levels	T4 Levels	TSH level
Primary hypothyroidism	Reduced	Reduced	Increased (Significantly)
Subclinical Hypothyroidism	Normal or Low	Normal	Normal or Low
Primary hyperthyroidism	Increased	Increased	Reduced (at times undetectable)
Subclinical Hyperthyroidism	Normal or High	Normal	Normal or High
