### X-RAY CHEST PA VIEW

Both lung fields show equal translucency and vasculature.

Pleural spaces are clear.

The cardiac size is normal.

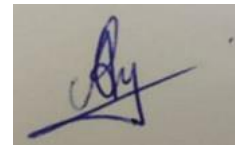

The domes of diaphragm are normal in position & show smooth outline.

The bony parts are normal.

#### **Impression:**

- **No obvious significant abnormality is seen.**

Suggest: Clinical correlation.

**Dr. Abhishek Yadav**  
**Consultant Radiologist**

Note: Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. X-ray is known to have inter-observer variations. Further/ follow up imaging may be needed in some cases for confirmation/ exclusion of diagnosis. Not all fractures may be visible in given X-ray views; hence a clinical correlation is suggested in cases of injury with swelling and restricted movements. Please interpret accordingly.
