USG ABDOMEN AND PELVIS

LIVER: Liver appears normal in size 14.7cm and shows diffuse increased echotexture. There is no intra-hepatic biliary radical dilatation. No evidence of any focal lesion.

GALL BLADDER: Gall bladder is distended and appears normal. Wall thickness is within normal limits. There is no evidence of any calculus. Portal vein is normal. CBD is normal.

PANCREAS: Pancreas appears normal in echotexture. There is no evidence of any focal lesion or calcification. Pancreatic duct is not dilated.

KIDNEYS: Both kidneys are normal in shape and echotexture. Corticomedullary differentiation is maintained. There is no evidence of any hydronephrosis, hydroureter or calculus.

Right kidney measures 11.3 x 4.6cm. Age related cortical base calcification seen in right kidney. Left kidney measures 11.4 x 4.5cm.

SPLEEN: Spleen is normal in size, shape and echotexture. No focal lesion is seen.

URINARY BLADDER: Urinary bladder is distended and normal. Wall thickness is within normal limits.

PROSTATE: Prostate is normal in size measuring 3.2 x 2.7 x 3.3cm (16.0gm) and echotexture. No evidence of any focal lesion.

No free fluid or significant lymphadenopathy is seen.

IMPRESSION: Fatty liver grade I.

Advice: Clinical co-relation and further evaluation.

DR. PRIYANKA NERULKAR

CONSULTANT RADIOLOGIST

Interpretation

The patient exercised according to the Bruce protocol for 6 m 20 s achieving a work level of Max. METS : 10.20. Resting heart rate initially 69 bpm, rose to a max. heart rate of 150 (90% of Pr.MHR) bpm. Resting blood Pressure 130 / 90 mmHg, rose to a maximum blood pressure of 160 / 100 mmHg. Significant ST-T changes in infero lateral leads,
 Positive for induced Ischaemic heart diseases.
 Advice: Cardiologist consult.

Kechi 0484- 2322022 / 4032022

CONDITIONS OF REPORTING

SEA BIRD MEDICARE CENTRE (DIVISION OF SEA BIRD MEDICARE PVT LTD)

1. Individual Laboratory Investigation should not be considered as conclusive and should be used along with other relevant clinical examination to achieve the final diagnosis. The reported results are for the information of the referring doctors only.
2. The test results relate only to the item/ items in our laboratory.
3. The values of a laboratory investigation are dependent on the quality of sample as well as the assay procedure used.
4. For test performed on specimens received from other locations (within and outside Mumbai), it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen(s).
5. Electronic images in the report are created by electronic processing. Sea Bird Medicare Centre makes no expressed or implied warranties or representations with respects to it and takes no responsibility for the authenticity, quality and size of the image, affected possibly due to a computer virus or other contamination.
6. Sea Bird Medicare centre confirms that all tests have been carried out with reasonable care, clinical safety and technical integrity
 - A. However due to certain factors such as reagent inconsistency, machine breakdown etc. beyond its control which could affect the testing, it does not make any representation or give any warranty about the accuracy of the reported results.
 - B. The test results are to be used for help in diagnosing/treating medical disease & not for forensic applications. Hence these results cannot be used for medico-legal purpose
7. Since Sea Bird Medicare Centre does not verify the identify or the details of the customer except in case of certain tests, it cannot be held responsible for any misrepresentation or misuse.
8. Partial reproduction of this report is not valid and should not be resorted to.
9. Any query from referring doctor pertaining to this report should be directed to Sea Bird Medicare Centre.
10. All dispute / claims concerning to this report are subject to Mumbai jurisdiction only.

REPORT

Glycosylated Haemoglobin (HbA1c)

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
HbA1c Non-diabetic : ≤ 5.7 % Pre-Diabetic : 5.7 - 6.4 % Diabetic : ≥ 6.5 (EDTA Whole Blood, Turbidimetric)	10.12	%	< 5.7
Mean Blood Glucose (MBG)	282.97	mg/dl	

Interpretation & Remark:

- HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).
- HbA1c has been endorsed by clinical groups & ADA (American Diabetes Association guideline 2022, for diagnosis of diabetes using a cut-off points of 6.5 %.
- Trends in HbA1c are a better indicator of diabetic control than a solitary test.
- Low glyated haemoglobin (below 4%) in a non-diabetic individual are often associated with systemic inflammatory diseases, chronic anaemia (especially severe iron deficiency & haemolytic), chronic renal failure and liver diseases. Clinical correlation suggested.
- To estimate the eAG from the HbA1C value, the following equation is used : $eAg(mg/dl) = 28.7 * A1c - 46.7$.
- Interference of Haemoglobinopathies in HbA1c estimation.
 - For HbF > 25%, an alternate platform (Fructosamine) is recommended for testing of HbA1c.
 - Homozygous hemoglobinopathy is detected, fructosamine is recommended for monitoring diabetic status.
 - Heterozygous state detected.
- In known diabetic patients, following values can be considered as a guide for monitoring the glycaemic control.
 - Excellent Control - 6 to 7 %
 - Fair to Good Control - 7 to 8 %
 - Unsatisfactory Control - 8 to 10 %
 - and Poor Control - More than 10 %
- Test done on Mispia I3 Automated Cartridge Based Specific Protein Analyser.

REPORT

Prostate-Specific Antigen Test

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
TOTAL PSA Serum, Method-ELFA	0.72	ng/ml	Please refer to 'NOTES' below.

METHOD: Two-step enzyme immunoassay sandwich method with a final fluorescent detection (ELFA) on MINI VIDAS automated immunoassay system.

NOTES:

REFERENCE RANGE AS PER AGE:

Age	PSA Concentration
<40 Years	0.21 to 1.72 ng/ml
40-49	0.27 to 2.19 ng/ml
50-59	0.27 to 3.42 ng/ml
60-69	0.22 to 6.16 ng/ml
>60	0.21 to 6.77 ng/ml

INTERPRETATION: PSA is used as a tumor marker to screen for and to monitor prostate cancer. Elevated levels of PSA are associated with prostate cancer, but they may also be seen with prostatitis and benign prostatic hyperplasia. PSA levels tend to increase in all men as they age. If prostate cancer is diagnosed, the total PSA test may be used as a monitoring tool to help determine the effectiveness of treatment. It may also be ordered at regular intervals after treatment to detect recurrence of the cancer. Concentrations of total PSA between 4.0 ng/ml and 10.0 ng/ml are often referred to as the gray zone. It is in this range that the free PSA is the most useful. When men in the gray zone have decreased levels of free PSA, they have a higher probability of prostate cancer; when they have elevated levels of free PSA, the risk is diminished. The ratio of free to total PSA can help the doctor decide whether or not a prostate biopsy should be performed.

REPORT

THYROID FUNCTION TEST

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
TSH	3.93	μ IU/ml	0.25-5 μ IU/ml
T3	0.84	nmol/l	0.92-2.33 nmol/l
T4	82.06	nmol/l	60-120 nmol/l

The assay principle combines an enzyme immunoassay competition method with a final fluorescent detection (ELFA).

INTERPRETATION

TSH : A high TSH result often means an under active thyroid gland that is not responding adequately to the stimulation of TSH due to some type of acute or chronic thyroid dysfunction. A high TSH value can also occur when someone with a known thyroid disorder or who has had their thyroid gland removed is receiving too little thyroid hormone medication. A low TSH result can indicate an over active thyroid gland (hyperthyroidism) or excessive amounts of thyroid hormone medication in those who are being treated for an under active (or removed) thyroid gland. An abnormal TSH test result is usually followed by additional testing to investigate the cause of the increase or decrease.

T3 : Triiodothyronine T3 contributes significantly to the maintenance of the euthyroid state, and the total T3 concentration has a role in screening for thyroid disease in conjunction with other tests. T3 alone cannot diagnose hypothyroidism, but it may be more sensitive than thyroxine (T4) for hyperthyroidism.

T4 : Thyroxine accounts for at least 90% of circulating protein-bound iodine. While >99.9% of T4 is protein-bound, primarily to thyrokin-binding globulin (TBG), it is the free fraction that is biologically active. In most patients the total T4 level is a good indicator of thyroid status, however it can sometimes be inadequate, and diagnostic efficiency may be improved by use of a total T4 test in conjunction with other tests.

REPORT

URINE ANALYSIS

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
Ocult Blood	Absent		Absent
<u>MICROSCOPIC EXAMINATION</u>			
Pus Cells	2 - 3 / hpf		2 - 3 / hpf
Red Blood Cells	Absent		Absent
Epithelial cells	1 - 2 / hpf		2 - 3 / hpf
Casts	Absent		Absent
Crystals	Absent		Absent
Other Findings	Absent		

METHOD:

Physical Examination : Visual Strip Method.

Chemical Examination : Bilirubin(Azo-coupling), Blood(Peroxidase), Glucose(Specific glucose-oxidase/oxidase reaction), Ketone(Rothera's test), Leukocytes(Reflectance Photometer(Leucocyte esterase)), Nitrite(Diazotization), pH(Double Indicator), Protein(Protein Error of Indicators), Specific Gravity(Refractometric method), Urobilinogen(Ehrlich).

Microscopy Examination : Automation/Manual Microscopy.

Kochi: 0484- 2322022 / 4032022

CONDITIONS OF REPORTING

SEA BIRD MEDICARE CENTRE (DIVISION OF SEA BIRD MEDICARE PVT LTD)

1. Individual Laboratory Investigation should not be considered as conclusive and should be used along with other relevant clinical examination to achieve the final diagnosis. The reported results are for the information of the referring doctors only.
2. The test results relate only to the item/ items in our laboratory.
3. The values of a laboratory investigation are dependent on the quality of sample as well as the assay procedure used.
4. For test performed on specimens received from other locations (within and outside Mumbai), it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen(s).
5. Electronic images in the report are created by electronic processing. Sea Bird Medicare Centre makes no expressed or implied warranties or representations with respects to it and takes no responsibility for the authenticity, quality and size of the image, affected possibly due to a computer virus or other contamination.
6. Sea Bird Medicare centre confirms that all tests have been carried out with reasonable care, clinical safety and technical integrity
 - A. However due to certain factors such as reagent inconsistency, machine breakdown etc. beyond its control which could affect the testing, it does not make any representation or give any warranty about the accuracy of the reported results.
 - B. The test results are to be used for help in diagnosing/treating medical disease & not for forensic applications. Hence these results cannot be used for medico-legal purpose
7. Since Sea Bird Medicare Centre does not verify the identify or the details of the customer except in case of certain tests, it cannot be held responsible for any misrepresentation or misuse.
8. Partial reproduction of this report is not valid and should not be resorted to.
9. Any query from referring doctor pertaining to this report should be directed to Sea Bird Medicare Centre.
10. All dispute / claims concerning to this report are subject to Mumbai jurisdiction only.

REPORT

VITAMIN D TOTAL 25-OH (D2 + D3)

Test	Result	Units	BIOLOGICAL REFERENCE INTERVAL
VITAMIN D TOTAL Serum, Method-ELFA	17.0	ng/ml	Interpretation mentioned below

METHOD: Enzyme immunoassay competition method with a final fluorescent detection (ELFA) on MINI VIDAS automated immunoassay system.

INTERPRETATION:

Deficiency: <20 ng/ml

Insufficiency: 20-29 ng/ml

Sufficiency: 30-100 ng/ml

Toxicity: >100 ng/ml

-Levels <20 ng/ml may be associated with more severe abnormalities and can lead to inadequate mineralization of newly formed osteoid resulting in rickets in children and osteomalacia in adults.

-Patients who present with hypercalcemia, hyperphosphatemia and low PTH may suffer either from ectopic, unregulated conversion of 25-OH-VitD to 1,25(OH)₂-VitD as an occur in granulomatous diseases, particularly sarcoidosis or from nutritionally-induced hypervitaminosis D. Serum 1,25 (OH)₂-VitD level will be high in both groups, but only patients with hypervitaminosis D will have serum 25-OH-VitD concentrations of >100 ng/ml.

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
------	---------	------	----------------------	---------

VITAMIN B - 12

Vitamin B - 12 Level CMA	326.0	pg/mL	187-883	
------------------------------------	--------------	-------	---------	--

Introduction :

Vitamin B12, a member of the corrin family, is a cofactor for the formation of myelin, and along with folate, is required for DNA synthesis. Levels above 300pg/ml are rarely associated with B12 deficiency induced hematological or neurological disease.

Clinical Significance :

Causes of Vitamin B12 deficiency can be divided into three classes: Nutritional, malabsorption syndromes and gastrointestinal causes. B12 deficiency can cause Megaloblastic anemia (MA), nerve damage and degeneration of the spinal cord. Lack of B12 even mild deficiencies damages the myelin sheath. The nerve damage caused by a lack of B12 may become permanently debilitating.

The relationship between B12 and MA is not always clear that some patients with MA will have normal B12 levels; conversely, many individuals with B12 deficiency are not afflicted with MA, less than 100 pg/ml often associated with varying degrees of clinical manifestations for vitamin B12 deficiency.

Serum vitamin B12 levels can fluctuate significantly over time in the same individual, Median intra-individual variation of 23 % (range: 0 to 119 percent), has been observed during repeat testing. Also, B12 levels tend to increase with age.

Different laboratories use different methods to measure vitamin B12, although vitamin B12 assays have not been standardized. As a result, there are different reference ranges. Hence, advisable to follow-up testing with same laboratory.

Decreased in:

Iron deficiency, normal near-term pregnancy, vegetarianism, partial gastrectomy/ileal damage, celiac disease, use of oral contraception, parasitic infestation, pancreatic deficiency, treated epilepsy and advancing age, use of certain drugs (proton-pump inhibitors, Metformin)

Increased in:

Temporarily increased after certain Drugs (vitamin supplements, Hydroxy urea), falsely high in Deteriorated sample.

High serum levels of vitamin B12 (Above 2000 pg/ml) can be in conditions with excess intake or administration of vitamin B12, liberation of vitamin B12 from an internal body reservoir (liver disorders), excess production or lack of clearance of vitamin B12 (as in renal disorders, certain hematological conditions like polycythemia)

CHEST X RAY REPORT

X-Ray No : 1209

Investigation : Chest PA View.

Bony thoracic cage is normal.

Cardiac silhouette appears normal in size and configuration.

Both lungs shows equal translucency and normal vasculature.

Both Hemidiaphragm visualised normal.

No evidence of any active parenchymal lesion seen.

Impression :

Normal Chest X-Ray.
