| Investigation               | <u>Observed</u><br><u>Value</u> | <u>Unit</u> | Biological<br>Reference Interval |
|-----------------------------|---------------------------------|-------------|----------------------------------|
| Glucose Postprandial (PPBS) | 91.31                           | mg/dL       | 70 - 140                         |

#### (Plasma - PP/GOD-PAP) INTERPRETATION:

Factors such as type, quantity and time of food intake, Physical activity, Psychological stress, and drugs can influence blood glucose level. Fasting blood glucose level may be higher than Postprandial glucose, because of physiological surge in Postprandial Insulin secretion, Insulin resistance, Exercise or Stress, Dawn Phenomenon, Somogyi Phenomenon, Anti- diabetic medication during treatment for Diabetes.

| Urine Glucose(PP-2 hours)                              | Negative |       | Negative  |
|--|----------|-------|-----------|
| (Urine - PP)   |          |       |           |

| Cholesterol Total<br>(Serum/CHOD-PAP with ATCS)              | 139.37                          | mg/dL       | Optimal: < 200<br>Borderline: 200 - 239<br>High Risk: >= 240                    |
| Triglycerides<br>(Serum/GPO-PAP with ATCS)                   | 166.02                          | mg/dL       | Optimal: < 150<br>Borderline: 150 - 199<br>High: 200 - 499<br>Very High: >= 500 |

INTERPRETATION: The reference ranges are based on fasting condition. Triglyceride levels change drastically in response to food, increasing as much as 5 to 10 times the fasting levels, just a few hours after eating. Fasting triglyceride levels show considerable diurnal variation too. There is evidence recommending triglycerides estimation in non-fasting condition for evaluating the risk of heart disease and screening for metabolic syndrome, as non-fasting sample is more representative of the õusualö" circulating level of triglycerides during most part of the day.

| INTERPRETATION:                          |                                 |             |                                  |
| Reference range for cord blood - upto 20 |                                 |             |                                  |

1 st trimester: 0.1-2.5 2 nd trimester 0.2-3.0 3 rd trimester : 0.3-3.0 (Indian Thyroid Society Guidelines) **Comment :** 

1.TSH reference range during pregnancy depends on Iodine intake, TPO status, Serum HCG concentration, race, Ethnicity and BMI. 2.TSH Levels are subject to circadian variation, reaching peak levels between 2-4am and at a minimum between 6-10PM.The variation can be of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.

3. Values&amplt,0.03 µIU/mL need to be clinically correlated due to presence of rare TSH variant in some individuals.

## **ABDOMINO-PELVIC ULTRASONOGRAPHY**

LIVER is normal in shape, size (13.8 cm) and has uniform echopattern. A hemangioma measuring10 x 9 mm is noted in the right lobe. No evidence of intrahepatic biliary ductal dilatation. Hepatic and portal vein radicals are normal.

GALL BLADDER shows normal shape and has clear contents. Wall is of normal thickness. CBD is of normal calibre.

**PANCREAS** is obscured by bowel gas shadows.

**SPLEEN** show normal shape, size and echopattern.

### **KIDNEYS**

Right kidney: Normal in shape, size and echopattern. Cortico-medullary differentiation is well madeout. No evidence of calculus or hydronephrosis.

Left kidney: Normal in shape, size and echopattern. Cortico-medullary differentiation is well madeout. No evidence of calculus or hydronephrosis.

The kidney measures as follows:

| -            | Bipolar length (cms) | Parenchymal thickness (cms) |
|--------------|----------------------|-----------------------------|
| Right Kidney | 10.0                 | 1.6                         |
| Left Kidney  | 9.8                  | 1.8                         |

**URINARY BLADDER** show normal shape and wall thickness. It has clear contents. No evidence of diverticula.

**UTERUS** is anteverted and has normal shape and size. It has uniform myometrial echopattern. Endometrial echo is of normal thickness - 6.9 mm. Uterus measures LS: 5.6 cms AP: 4.5 cms TS: 3.3 cms.

**OVARIES** are normal in size, shape and echotexture

POD & adnexa are free. No evidence of ascites.

## **IMPRESSION:**

• No sonological abnormality detected.
