BLOOD GROUP, ABO & RH TYPING

Blood Group, ABO & RH Typing

ABO Group	AB
RH Factor	Positive

The test to determine your blood group is called ABO typing. Your blood sample is mixed with antibodies against type A and B blood. Then, the sample is checked to see whether or not the blood cells stick together. If blood cells stick together, it means the blood reacted with one of the antibodies.

Rhesus (Rh) factor is an inherited protein found on the surface of red blood cells. **If your blood has the protein, you're Rh positive. If your blood lacks the protein, you're Rh negative.**

SGPT (ALT)			
SGPT (ALT)	52.0	High 00 - 40	U/L

Interpretation

SGPT exists predominantly in the liver and leaks into the bloodstream when produced in excess. The SGPT normal range is about 0 - 28 units per liter of blood serum. Thus, very high level of SGPT in the blood can be an indication of damage or problems related to the liver.

Serum Creatinine			
Serum Creatinine	0.83	0.60 - 1.40	mg/dL

BUN / Creatinine Ratio			
BUN / Creatinine Ratio	13.9	*****END OF REPORT*****
