Parameter	Result	Unit	Biological Reference
Hb A1C Suggested level	5.8 %	of Total Hb	>8.0 Action <7.0 Goal <6.0 Non-diabetic
Mean Blood Glucose	112.0	mg/dL	0 - 154

Degree of Glucose Control Normal Range:

Poor Control >7.0% *

Good Control 6.0 - 7.0 %**Non-diabetic level < 6.0 %

* High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy, etc.

* Some danger of hypoglycemic reaction in Type I diabetics.

* Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).-

Trends in HbA1c are a better indicator of diabetic control than a solitary test.-

To estimate the eAG from the HbA1C value, the following equation is used: $eAG(mg/dl) = 28.7 * A1c - 46.7$ -

HbA1C Estimation can get affected due to .1) Anaemia .2) Chronic renal failure .3) Vitamin A .4) Vitamin C .5)

HbA1

c is falsely low in diabetics with

hemolytic disease Fructosamine is recommended in these patients which indicates diabetes control over 15 days .6

) Interference of Haemoglobinopathies in HbA1c estimation .A) HbF > 5%, an alternate platform (Boronate

affinity chromatography) is recommended for testing of HbA1c.B) Homozygous hemoglobinopathy is detected,

fructosamine is recommended for monitoring diabetic statusC) Heterozygous state detected (D10/ turbo is

corrected for HbS and HbC trait).Hemoglobin electrophoresis (HPLC method) Is recommended for detecting

hemoglobinopathy.
