| PROSTATIC SPECIFIC ANTIGEN(TOTAL) (ELFA) 2.10 ng/mL 0 - 4 | |
|---|--|

Note:

TPSA as a Tumor marker is used as an additional test for prognosis and monitoring of therapy for patients with diagnosed malignant tumors. It may offer a diagnostic value for screening patients with suspected malignancies, as high values may be experienced in situations like benign prostatic hyperplasia, prostatitis, bladder catheterisation, urinary retention, endoscopic examination. Value in between 4-10ng/ml may be an indication of Benign Prostate Hyperplasia or prostate Carcinoma, values greater than 10ng/ml may indicate high risk of Carcinoma.

The test has been carried out in Fully Automated Immunoassay System VIDAS using ELFA (Enzyme Linked Fluorescence Assay) technology.

** End of Report **

IMPORTANT INSTRUCTIONS CL - Critical Low, CH - Critical High, H - High, L - Low

Laboratory test results are to be clinically correlated. Storage and discard of Specimen shall be as per AIMS specimen retention policy. Test results are not valid for Medico - Legal purposes.

Comments:

• Disorders of Lipid metabolism play a major role in atherosclerosis and coronary heart disease.

• There is an established relationship between increased total cholesterol & LDL cholesterol and myocardial infarction.

• HDL cholesterol level is inversely related to the incidence of coronary artery disease.

Major risk factors which adversely affect the lipid levels are:

- 1. Cigarette smoking.
- 2. Hypertension.

3. Family history of premature coronary heart disease.

4. Pre-existing coronary heart disease.

| HBA1C (Turbidimetric Immuno-inhibition) | | 5.6 | % | 4.0 - 6.2 | | |
|---|--|-----|---|-----------|--|--|
| INTERPRETATION: | | | | | | |

| HbA1c % | Degree of Glucose Control |
|-----------|--|
| >8% | Action suggested due to high risk of developing long term complications like Retinopathy, Nephropathy, Cardiopathy and Neuropathy |
| 7.1 - 8.0 | Fair Control |
| <7.0 | Good Control |

Note:

1.A three monthly monitoring is recommended in diabetics.

2. Since HbA1c concentration represents the integrated values for blood glucose over the preceding 6 - 10 weeks and is not affected by daily glucose fluctuation, exercise and recent food intake, it is a more useful tool for monitoring diabetics.

WHOLE ABDOMEN:

Both the hepatic lobes are normal in size and echotexture (Liver measures 12.5 cm)

No focal lesion seen. Intrahepatic biliary radicals are not dilated.

Portal vein is normal in calibre

Gall bladder is well distended. Wall thickness is normal. No calculus seen.

CBD is normal in calibre.

Pancreas is normal in size and echotexture.

Spleen is normal in size (9.0 cm) and echotexture.

Both kidneys are normal in size and echotexture (Right kidney (9.8 cm), Left kidney (9.4 cm). Corticomedullary distinction is maintained. No calculus or hydronephrosis seen.

Urinary bladder appears normal. (Pre void Vol. 196 cc, Post void Vol. 10 cc)

Prostate appears enlarged in size (Vol. 41 cc), outline and echotexture.

No free fluid or collection seen. No basal pleural effusion seen.

No significant lymphadenopathy seen.

No dilated bowel loop seen.

IMPRESSION:

Prostatomegaly.

Please correlate clinically.
