Note: Please correlate with clinical condition
 Note: Clinical Significance:
 Thyroid function tests (TFTs) is a collective term for blood tests used to check the function of the thyroid. TFTs may be requested if a patient is thought to suffer from hyperthyroidism (overactive thyroid) or hypothyroidism (underactive thyroid), or to monitor the effectiveness of either thyroid-suppression or hormone replacement therapy. It is also requested routinely in conditions linked to thyroid disease, such as atrial fibrillation and anxiety disorder. A TFT panel typically includes thyroid hormones such as thyroxine (T4), and triiodothyronine (T3) depending on local laboratory policy.

CHAMBERS:-

LV Normal / Enlarged / Clear / Thrombus /
RA Normal / Mildly Dilated / Enlarged / Clear / Thrombus / Hypertrophied
RV Normal / Mildly Dilated / Enlarged / Clear / Thrombus / Hypertrophied
LA Normal / Enlarged / Clear / Thrombus / Myxoma; **LAA: Clear** / Thrombus
 Regional wall motion abnormality: **Absent** / Present
 Contraction Normal LV shows concentric LVH, no gradient across LVOT / Inetic / Intra capillary

SUMMARY:-

- All Cardiac Chambers dimensions are within normal limits.
- NO RWMA
- LVEF -55-60%
- NORMAL LV FUNCTION
- NO MR / NO AR
- TRACE TR, PASP-14mmHG+RAP
- GOOD RV FUNCTION
- IAS/VS. No Flow seen across IAS/VS.
- No Thrombus/Mass in any chamber.
- No Pericardial Effusion.

COMMENTS:- Normal LV Function, Trace TR.

Test	Result	Unit	Reference Range
Pap Smear			
CYTOPATHOLOGY NO.: C- 689/24			

SPECIMEN SUBMITTED: 2 Conventional cervical smears (2 smears prepared).

SPECIMEN ADEQUACY: Unsatisfactory for evaluation.

MICROSCOPIC EXAMINATION:

Squamous cell population:

Superficial – Occasional.

INTERPRETATION:

- Unsatisfactory for evaluation; specimen processed and examined but unsatisfactory for evaluation of epithelial abnormality due to insufficient squamous cellularity.

COMMENT:

1. The smears are reported using the Bethesda system (2014) for reporting cervical cytology.

2. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false-negative and false-positive results. Technologies such as liquid-based preparations may decrease but will not eliminate all false negative results. Follow-up of unexplained clinical signs and symptoms is recommended to minimize false-negative results.

3. In patients with squamous or glandular intraepithelial abnormalities, further diagnostic follow-up procedures, such as HPV testing, colposcopy / biopsy with endocervical sampling are suggested, as clinically indicated.

1. All reports are for interpretation by the treating doctor only and have to be viewed and correlated with clinical examination and other investigations. 2. All investigations have their limitation which is imposed by the limits to sensitivity and specificity of individual assay procedures as well as the quality of the specimen received by the laboratory. Isolated laboratory investigations never confirm the final diagnosis of the disease. 3. If the result (s) of tests are alarming or unexpected the doctor is advised to contact the lab immediately for needful and necessary action.
