Report

VRX HEALTH CARE PVT. LTD.

Name	: MR. MADABATTULA CHINNA RAO	Id	: VRX-38431
Age/Gender	: 41 Years 10 Months /M	Registered On	: 23/03/2024 08:46
Referred By	: MEDIWHEEL	Collected Time	: 23/03/2024 09:22
		Reported On	: 23/03/2024 15:47

Investigations	Observed Value	Bio. Ref. Interval	METHOD
CBC-COMplete BLOOD COUNT			
HAEMOGLOBIN	15.5	13.0 - 17.0 gm/dl	
RBC COUNT	5.45	4.5 - 5.5 Millions/Cmm	
PACKED CELL VOLUME	46.6	40.0 - 50.0 %	
MEAN CORP VOL (MCV)	85.5	83.0 - 101.0 fL	
MEAN CORP HB (MCH)	28.44	27 - 32 pg	
MEAN CORP HB CONC (MCHC)	33.26	31.5 - 34.5 g/dl	
RDW	13.3	11.6 - 14.0 %	
WBC COUNT	5.0	4.0 - 10.0 *1000/cmm	
NEUTROPHILS	43.2	40 - 80 %	
LYMPHOCYTES	44.5	20 - 40 %	
EOSINOPHILS	2.5	1 - 6 %	
MONOCYTES	9.6	2 - 10 %	
BASOPHILS	0.2		
PLATELETS COUNT	229	150 - 410 *1000/Cmm	
PLATELETS ON SMEAR	Adequate		
MPV	7.8	6.78 - 13.46 %	
PDW	18.2	9 - 17 %	
RBC MORPHOLOGY	NORMOCYTIC NORMOCHROMIC		

REMARKS

EDTA Whole Blood - Tests done on Automated NIHON KOHDEN MEK-7300K 5 Part Analyzer. (Haemoglobin by Photometric and WBC, RBC, Platelet count by Impedance method, WBC differential by Floating Discriminator Technology and other parameters are calculated) All Abnormal Haemograms are reviewed and confirmed microscopically. Differential count is based on approximately 10,000 cells.

MEDIWHEEL FULL BODY ANNUAL PLUS ABOVE 50 MALE			
ESR	12	< 20 mm at the end of 1Hr.	WESTERGREN
<p>INTERPRETATION ESR(Erythrocyte Sedimentation Rate)-The ESR measures the time required for erythrocytes from a whole blood sample to settle to the bottom of a vertical tube. Factors influencing the ESR include red cell volume, surface area, density, aggregation, and surface charge. The ESR is a sensitive, but nonspecific test that is frequently the earliest indicator of disease. It often rises significantly in widespread inflammatory disorders due to infection or autoimmune mechanisms. Such elevations may be prolonged in localized inflammation and malignancies. Increased ESR: may indicate pregnancy, acute or chronic inflammation, tuberculosis, rheumatic fever, paraproteinemias, rheumatoid arthritis, some malignancies, or anemia. Decreased ESR: may indicate polycythemia, sickle cell anemia, hyperviscosity, or low plasma protein.</p>			
BLOOD GROUP	O POSITIVE		SLIDE AGGLUTINATION - FORWARD GROUPING

REPORT

Biochemistry

Test Name	Result	Unit	Biological Reference Interval
HbA1c (Glycylated Haemoglobin) WB-EDTA			
HbA1c (Glycylated Haemoglobin)	5.8	%	Normal <5.7 % Pre Diabetic 5.7 - 6.4 % Diabetic >6.5 % Target for Diabetes on therapy < 7.0 % Re-evaluation of therapy > 8.0 % Reference ADA Diabetic Guidelines 2013.

Method : HPLC (High Performance Liquid Chromatography)

Mean Blood Glucose 119.2 mg/dL

Method : Calculated

Correlation of A1C with average glucose

A1C (%)	Mean Blood Glucose (mg/dl)
6	126
7	154
8	183
9	212
10	240
11	269
12	298

Interpretation :

1.The HbA1c levels correlate with the mean glucose concentration prevailing in the course of Pts recent history (apprx 6-8 weeks) & therefore provides much more reliable information for glycemia control than the blood glucose or urinary glucose. This Methodology is better than the routine chromatographic methods & also for the diabetic pts,having HEMOGLBINOPATHIES OR UREMIA as Hb variants and uremia does not INTERFERE with the results in this methodology.

2.It is recommended that HbA1c levels be performed at 4 - 8 weeks during therapy in uncontrolled DM pts.& every 3 - 4 months in well controlled diabetics.

3.Mean blood glucose (MBG) in first 30 days (0-30)before sampling for HbA1c contributes 50% whereas MBG in 90 - 120 days contribute to 10% in final HbA1c levels

		Reported On	: 23/03/2024 15:47

Investigations	Observed Value	Bio. Ref. Interval	METHOD
----------------	----------------	--------------------	--------

MEDIWHEEL FULL BODY ANNUAL PLUS ABOVE 50 MALE

Lipid Test			
TOTAL CHOLESTEROL	185.4	130 - 200 mg/dl	
TRIGLYCERIDES	71.0	25 - 160 mg/dl	
HDL CHOLESTEROL	37.0	35 - 80 mg/dl	
LDL CHOLESTEROL	134.2	< 100 mg/dl	
VLDL CHOLESTEROL	14.2	7 - 35 mg/dl	
LDL-HDL RATIO	3.63	< 3.5 mg/dl	
TC-HDL CHOLESTEROL RATIO	5.01	2.5 - 4.0 mg/dl	

INTERPRETATION
 SAMPLE : SERUM, PLAIN
 Note : Non HDL is the best risk predictor of all cholesterol measures, both for CAD(Coronary Artery Diseases) events and for strokes. High Risk patients like Diabetics, Hypertension . With family history of IHD, Smokers, the Desirable reference values for cholesterol & Triglyceride are further reduced by 10 mg % each.
 *VLDL and LDL Calculated.
 (References : Interpretation of Diagnostic Tests by Wallach's)
 Technique : Fully Automated Pentra C-200 Biochemistry Analyzer.
 **All Test Results are subjected to stringent international External and Internal Quality Control Protocols.

REPORT

Immunology

Test Name	Result	Unit	Biological Reference Interval
-----------	--------	------	-------------------------------

1.Total T3 (Total Tri- ido- thyronine) is one of the bound form of thyroid hormones produced by thyroid gland.Its production is tightly regulated by TRH(Thyrotropin Releasing Hormone) from hypothalamus and TSH (Thyroid stimulating hormone) from anterior pituitary gland.In euthyroid state,thyroid gland secretes 10- 15% of T3,which in circulation is heavily protein bound and is the principle bioactive form.T4 is converted to T3 by deiodinases in peripherally (Mainly Liver),and in target organs . Total T3 levels are increased in primary and central hyperthyroidism and T3 toxicosis& its levels are decreased in the primary and central hypothyroidism.but its normal in case of subclinical hypothyroidism and hyperthyroidism alterations in Total T 3 levels can also occur in conditions like Non -Thyroidal illness,pregnancy, certain drugs and genetic conditions.

2.Total T4 (Total tetra- iodo- thyronine or total thyroxin)is one of the bound form of thyroid hormones produced by thyroid gland .its production is tightly regulated TRH(Thyrotropin Releasing Hormone) from hypothalamus and TSH (Thyroid stimulating hormone) from anterior pituitary gland .In euthyroid state,thyroid gland secretes 85- 90% of Thyroxine,which is circulated is heavily protein bound and has more half life than T 3 .Total T4 levels are increased in primary and central hyperthyroidism and its levels are decreased in primary and central hypothyroidism but its normal in case of subclinical hypothyroidism and hyper thyrodism and T3 Toxicosis is alterations in Total T4 Levels can also occur in conditions like Non -Thyroidal illness, pregnancy,certain drugs and genetic conditionS.

3.TSH (Thyroid stimulating hormone or Thyrotropin)is produced by anterior pituitary in response to its stimulation by TRH (Thyrotprn releasing hormone) released from hypothalamus .TSH and TRH releases are regulated by thyroid hormone through a feedback mechanism. There are several cases causes that can lead to thyroid gland dysfunction or dysregulation which eventually results in hypothyroidism or hypothyroidism based on the thyroid hormones and TSH levels it can be classified as subclinical primary or central apart from this certain other conditions can also lead to diagnostic confusions in the interpretation of a thyroid function test .They are pregnancy, Levothyroxine therapy certain other drug therapy assay interference alterations in the thyroid hormones binding proteins concentration and its binding capacity conditions of non-thyroidal illness and certain genetic conditions . TSH secretions exhibits diurnal pattern, so its advices able to check it during morning. Measurement of TSH alone may be misleading in conditions like recent treatment for thyrotoxicosis, TSH assay interference, central hypothyroidism. TSH Secreting pituitary adenoma,resistantance to thyroid hormone ,and disorders of thyroid hormones transport or metabolism.TSH receptor present in thyroid gland can be stimulated or inhibited by autoantibodies produced during autoimmune thyroid disorders which can lead to functional abnormalities of thyroid gland.The American Thyroid association determined that only TSH assays with third generation functional sensitivity (Sensitivity =0.01 mIU/L) are sufficient for use as screening tests for hypothyroidism their recommendation in consistent with the National Academy of Clinical Biochemistry Laboratory Medicine practice guideline for assessment of thyroid function.

REPORT

Immunology

Test Name	Result	Unit	Biological Reference Interval
Total PSA Method : ECLIA	0.551	ng/mL	0.03 - 3.5

Interpretation :

Serum PSA is a useful diagnostic tool for diagnosis of prostatic cancer. PSA levels should always be assessed in conjunction with the patient's medical history, clinical examination, prostatic acid phosphatase and radiological findings. Elevated levels are indicative of pathologic conditions of prostatitis, Benign hyperplasia or Prostatic adenocarcinoma. Rate of the fall of PSA levels to non detectable levels can occur following radiotherapy, hormonal therapy or radical surgical removal of the prostate & provides information of the success of treatment. Inflammation or trauma of prostate can lead to elevated PSA levels of varying magnitude and duration.

PATIENT NAME : MR. MADABATTULA CHINNA RAO	AGE : 41 YEARS
LAB NO :	SEX : MALE
REF DR NAME : MEDIWHEEL	DATE : 23/03/2024

USG WHOLE ABDOMEN

LIVER:

The liver is normal in size, shape and smooth margins. It shows normal parenchymal echo pattern. The intra hepatic biliary and portal radical appear normal. No evidence of any intra hepatic cystic or solid lesion seen. The main portal vein and CBD appears normal.

GALL BLADDER:

The gall bladder is partially distended and normal. No gall stones or mass lesions seen.

PANCREAS:

The pancreas is well visualized and normal. No evidence of solid or cystic mass lesion.

KIDNEYS:

Both the kidneys are normal in size shape and echotexture. No evidence of any calculus or hydronephrosis is seen. Right kidney measures 9.0 x 4.1 cm. Left kidney measures 9.3 x 4.2 cm.

SPLEEN:

The spleen is normal in size and echotexture. No evidence of focal lesion is noted. There is no evidence of any lymphadenopathy or ascites.

URINARY BLADDER:

The urinary bladder is distended and reveal no intraluminal abnormality.

PROSTATE:

The prostate is normal in size and volume is 20 cc.

IMPRESSION:

No significant abnormality is seen.

DR. SHRIRIKANT BODKE (CONSULTANT RADIOLOGIST)

Note: Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. USG is known to have inter-observer variations. Further / Follow-up imaging may be needed in some case for confirmation of findings Please interpret accordingly. Patient has been explained in detail about the USG findings, measurements and limitations. In case of any typographical error in the report, patient is requested to immediately contact the center for rectification within 7 days post which the center will not be responsible for any rectification.
