

Hardwari Lal 48 Yrs / 580 / 13.04.2024

Ref by: Dr. Nand Kishore Chhangani

Transabdominal sono screening scan – whole abdomen

Extensive bowel gases precluded optimal examination.

Hepato-biliary system:

Liver is enlarged in size. Hepatic parenchymal echotexture is bright, homogenous and uniform. No focal lesion seen. Intrahepatic biliary radicles are not dilated. Portal vein and cbd are normal in caliber. Gall bladder is seen in normal distension. Walls are normal in thickness and are smooth. No mass is seen. Lumen is anechoic. Pancreas is normal in size and echotexture. Pancreatic duct is not dilated. No area of calcification is seen in pancreas.

Uro-genital system:

Both the kidneys are normal in size. Parenchymal echotexture is normal. Corticomedullary differentiation is maintained. A few calculi of 03 - 04 mm are seen in both the kidneys. Urinary bladder is seen in partial distension. Lumen is anechoic. Prostate is normal in size. Prostatic echotexture is normal. Contours are normal. No obvious mass is seen.

Spleen & retroperitonium:

Spleen is normal in size. Parenchymal echotexture is normal. Most of the retroperitonium is not seen clearly, obscured by bowel gases.

No ascites seen.

Sonographic findings are suggestive of:-

- Hepatomegaly with fatty changes grade – I.
- Bilateral renal gravels.

This is only professional opinion based on imaging finding and not the diagnosis
It should be correlated clinically, to arrive at proper conclusion.

Dr. Rakesh Middha

Medication :

History :

Test End Reason : Test Complete

Findings :

The patient exercised according to BRUCE for 6:54, achieving a work level of Max METS:8. Resting heart rate initially 93 bpm, rose to a max. heart rate of 162 bpm which represents 94% of maximum age predicted heart rate. Resting blood pressure 120/80 mmhg, rose to a maximum blood pressure of 130/90 mmhg. The exercise stress test was stopped due to Test Complete

Parameters :

- Exercise Time : 6:54 minutes
- Max HR attained : 162 bpm 94% of Max Predictable HR 173
- Max BP : 130/90(mmHg)
- Workload attained : 8 (Fair Effort Tolerance)
- No significant ST segment changes noted during exercise or recovery.
- No Angina/Arrhythmia/S3/murmur
- Final Impression : Test is negative for inducible ischaemia.
- Advised/Comp/Depression: 0:00

HEMATOLOGY

Glycosylated Hemoglobin (HbA1C)	5.9	%	- %
ABG(Average Blood Glucose)	122.63	MG/DL	- MG/DL

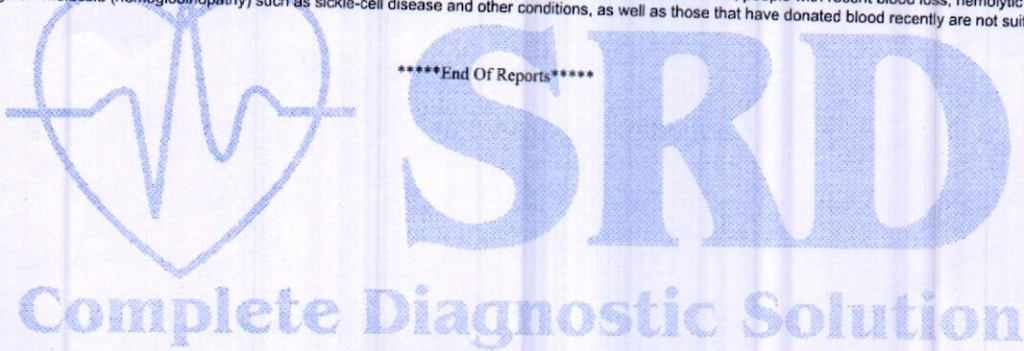

Methodology: Ion exchange H.P.L.C. Using instrument: D-10 with EDTA

Hemoglobin A1C % Degree of Glucose Control

> 8 Action suggested
 <7 Goal
 < 6 Non – Diabetic level

Clinical Information:

Glycated hemoglobin testing is recommended for both (a) checking blood sugar control in people who might be pre – diabetic and (b) monitoring blood sugar control in patients with more elevated levels, termed diabetes mellitus. The American diabetes association guidelines suggest that the Glycosylated hemoglobin test be performed at least two times a year in patients with diabetes that are meeting treatment goals (and that have stable glycemic control) and quarterly in patients with diabetes whose therapy has changed or that are not meeting glycemic goals. Glycated hemoglobin measurement is not appropriate where there has been a change in diet or treatment within 6 weeks. Hence, people with recent blood loss, hemolytic anemia, or genetic differences in the hemoglobin molecule (hemoglobinopathy) such as sickle-cell disease and other conditions, as well as those that have donated blood recently are not suitable for this test.

HARMONES

THYROID PROFILE

T3	1.54	ng/ml	0.6-1.81 ng/ml
T4	6.52	ug/dl	4.5-12.6 ug/dl
TSH	4.02	uIU/ml	0.35-5.5 uIU/ml

Interpretation of TSH :

Kindly correlate with age & clinical findings.

Biological reference range:

Children: Pregnancy:

1 - 2 days 3.20 - 34.6 uIU/ml 1st Trimester : 0.10 - 2.50

3 - 4 days 0.70 - 15.4 uIU/ml 2nd Trimester : 0.20 - 3.00

15 days - 5 mths 1.70 - 9.10 uIU/ml 3rd Trimester : 0.30 - 3.00

5 mths - 20 yrs 0.70 - 6.40 uIU/ml

Primary malfunction of the thyroid gland may result in excessive (hyper) or low(hypo) release of T3 or T4.

In additional, as

TSH directly affect thyroid function, malfunction of the pituitary or the hypothalamus influences the thyroid gland

activity. Disease in any portion of the thyroid-pituitary-hypothalamus system may influence the level of T3 and T4 in the

blood, in Primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary

hypothyroidism, TSH

levels may be low. In addition, In Euthyroid sick Syndrom, multiple alterations in serum thyroid function test findings have

been recognized.

BIO - CHEMISTRY

S.PSA	1.45	ng/ml	0.5-4 ng/ml
-------	------	-------	-------------

SUMMARY:-

PSA is localized in the cytoplasm of prostatic ductal epithelium and secretions of the ductal lumina. Because PSA is a secretory protein of the prostate, it ca be recovered and purified both from prostatic tissue and from seminal plasma. PSA has been found to be primarily associated with prostate tissue, and elevated serum PSA has been found in patients with Prostate cancer, benign prostatic hypertrophy, and inflammatory conditions. Serum PSA alone is not suitable as a screen for hypertrophy (BPH), nor is it recommended as a guide in disease stating. The combination of PSA measurement and rectal examination with ultrasonography in the event of abnormal findings may provide a better method of detecting prostate cancer than rectal examination alone. PSA determination can be useful detecting metastatic or persistent disease in patients following surgical medical treatment of prostatic cancer

Test performed on fully automated Architect I 1000 SR Chemiluminescent immuno Assay instrument.

note : All the controls are within acceptable limits.
