Hb A 1c

5.9 %

> 8 : Action Suggested
7-8 : Good Control
< 7 : Goal
6-7 : Near Normal Glycemia
< 6 : Non-diabetic Level

Comments

Hb A1C also known as Glycosylated Haemoglobin is the most important test for the assessment of longterm Blood glucose control (also called glycemc control).
Hb A1C reflects mean glucose concentration over past 6-8 week and provides a much better indication of longterm glycemc control than blood glucose determination.
This Reaction is irreverdible & therefore remains unaffected glucose & Haemoglobin. Long term complications of diabetes such as Retinopathy (Eye-complications), nephropathy(Kidney-complications) & neuropathy(nerve complications) are potentially serious and can lead to blindness, kidney failure etc. Glycemc control as monitored by Hb A1C measurement is considered most important.
