**HbA1c(Glycosylated Haemoglobin )WB-EDTA**

(HbA1C) Glycosylated Haemoglobin : 5.1 %  
 Normal <5.7 %  
 Pre Diabetic 5.7 - 6.5 %  
 Diabetic >6.5 %  
 Target for Diabetes on therapy < 7.0 %

7	154
8	183
9	212
10	240
11	269
12	298

Method High Performance Liquid Chromatography (HPLC).

**INTERPRETATION**

- \* The HbA1c levels correlate with the mean glucose concentration prevailing in the course of Pts recent history (apprx 6-8 weeks) & therefore provides much more reliable information for glycemia control than the blood glucose or urinary glucose.
- \* This Methodology is better than the routine chromatographic methods & also for the daibetic pts.having HEMOGLBINOPATHIES OR UREMIA as Hb varaints and uremia does not INTERFERE with the results in this methodology.
- \* It is recommended that HbA1c levels be performed at 4 - 8 weeks during therapy in uncontrolled DM pts.& every 3 - 4 months in well controlled daibetics .
- \* Mean blood glucose (MBG) in first 30 days ( 0-30 )before sampling for HbA1c contributes 50% whereas MBG in 90 - 120 days contribute to 10% in final HbA1c levels

Grey zone values observed in physiological/therapeutic effect.

**Note:**

**T3 :**

1. Decreased values of T3 (T4 and TSH normal) have minimal Clinical significance and not recommended for diagnosis of hypothyroidism.
2. Total T3 and T4 values may also be altered in other conditions due to changes in serum proteins or binding sites ,Pregnancy, Drugs (Androgens,Estrogens,O C pills, Phenytoin) etc. In such cases Free T3 and free T4 give corrected Values.
3. Total T3 may decrease by < 25 percent in healthy older individuals

**T4 :**

1. Total T3 and T4 Values may also be altered in other condition due to changes in serum proteins or binding sites, Pregnancy Drugs (Androgens,Estrogens,O C pills, Phenytoin), Nerphrosis etc. In such cases Free T3 and Free T4 give Corrected values.

**TSH :**

1. TSH Values may be transiently altered because of non thyroidal illness like severe infections,liver disease, renal and heart failure. Severe burns, trauma and surgery etc.
2. Drugs that decrease TSH values e,g L dopa, Glucocorticoids.
3. Drugs that increase TSH values e.g. Iodine,Lithium, Amiodarone
