**HBA1C-GLYCOSYLATED HAEMOGLOBIN**

Test Description	Result	Unit	Biological Reference Range
HbA1c- (EDTA WB)	5.0	%	< 5.6 Non-diabetic 5.7-6.4 Pre-diabetic > 6.5 Diabetic
Estimated Average Glucose (eAG)	96.80	mg/dL	
Method : HPLC-Biorad D10-USA			

**INTERPRETATION**

1. HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).
2. HbA1c has been endorsed by clinical groups & ADA (American Diabetes Association) guidelines 2017, for diagnosis of diabetes using a cut-off point of 6.5%.
3. Trends in HbA1c are a better indicator of diabetic control than a solitary test.
4. Low glycosylated haemoglobin (below 4%) in a non-diabetic individual are often associated with systemic inflammatory diseases, chronic anaemia (especially severe iron deficiency & haemolytic), chronic renal failure and liver diseases. Clinical correlation suggested.
5. To estimate the eAG from the HbA1C value, the following equation is used:  $eAG(mg/dl) = 28.7 \times A1c - 46.7$
6. Interference of Haemoglobinopathies in HbA1c estimation.
  - A. For HbF > 25%, an alternate platform (Fructosamine) is recommended for testing of HbA1c.
  - B. Homozygous hemoglobinopathy is detected, fructosamine is recommended for monitoring diabetic status
  - C. Heterozygous state detected (D10/ Tosho G8 is corrected for HbS and HbC trait).
7. In known diabetic patients, following values can be considered as a tool for monitoring the glycemic control.
  - Excellent Control - 6 to 7 %,
  - Fair to Good Control - 7 to 8 %,
  - Unsatisfactory Control - 8 to 10 %
  - and Poor Control - More than 10 %.

**Note** : Haemoglobin electrophoresis (HPLC method) is recommended for detecting hemoglobinopathy

<b>Interpretations:</b>			
* Assay result should be interpreted in context to the clinical condition and associated result of the other investigation.			
* Previous treatment with corticosteroid therapy may result in lower TSH levels while thyroid hormone levels are normal.			
* Results are invalidated if the client has undergone a radionuclide scan within 7-14 days before the test.			
* Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of the condition is resolved.			
* The production circulation and disposal of thyroid hormones are altered throughout the stages of pregnancy.
