< 6 : Non-diabetic Level

Comments

Hb A1C also known as Glycosylated Haemoglobin is the most important test for the assessment of longterm blood glucose control (also called glycemic control).

Hb A1C reflects mean glucose concentration over past 69-8 week and provides a much better indication of longterm glycemic control than blood glucose determination.

This Reaction is irreversible & therefore remains unaffected glucose & Haemoglobin. Long term complications of diabetes such as Retinopathy (Eye-complications).

nephropathy(Kidney-complications) & neuropathy(nerve complications) are potentially serious and can lead to blindness, kidney failure etc. Glycemic control as monitored by Hb A1C measurement is considered most important.
