**Ultrasound Examination of Breasts:**

**US examination of both breasts was performed using a high frequency probe.**

On US both breasts show the normal appearances of post-menopausal adult breasts. Normal echogenic adipose tissue is seen. The glandular elements are sparse. The fibrous tissue stroma is well defined. No evidence of any SOL or abnormal calcification seen. No evidence of any abscess seen. Areolar and axillary regions are normal.

**NORMAL STUDY.**

**Regards.**

REFD. BY.	HEALTH CHECK UP	DATE	27.04.24

### Ultrasound Examination of Whole Abdomen & Pelvis :

**Liver:** Liver shows grade I fatty changes . No focal SOL is seen in liver. IHBR & portal radicles are normal.

**Gallbladder:** Gallbladder shows normal anechoic pattern. No evidence of cholecystitis or cholelithiasis seen. Common bile duct is normal in course & caliber.

**Pancreas:** Pancreas shows normal size & echotexture.

**Spleen:** Spleen shows normal size, outline & echotexture.

**Kidneys:** Kidneys show normal size, shape, position & echotexture. No calculus, hydronephrosis or SOL is seen in kidneys. Cortico- medullary differentiation and cortical thickness is normal on both sides.

No supra- renal mass seen.

Great abdominal vessels are normal.

Domes of diaphragm are seen to move normally & synchronously in respiration. No supra- or infra diaphragmatic collection is seen.

No ascites or pericardial effusion seen.

No para aortic lymph nodes seen.

**Urinary bladder:** Urinary bladder shows normal anechoic pattern. No calculus, SOL or diverticulum seen.

**Uterus:** Uterus & Adnexal regions including the ovaries are sonographically normal for age .

IMP- GRDAE I FATTY LIVER

Regards.

 Sample Collected : Apr 27, 2024, 04:21 PM  
 Report Date : Apr 27, 2024, 08:29 PM  
 Barcode No : HY532562  
 Report Status : Final Report

Test Description	Value(s)	Unit(s)	Reference Range
------------------	----------	---------	-----------------

**HbA1C (Glycosylated Haemoglobin)**

Glycosylated Hemoglobin (HbA1c) HPLC	6	%	< 5.7
Estimated Average Glucose	125.5	mg/dL	Refer Table Below

**Interpretation:**

Interpretation For HbA1c% As per American Diabetes Association (ADA)

Reference Group	HbA1c in %
Non diabetic adults >=18 years	<5.7
At risk (Prediabetes)	5.7 - 6.4
Diagnosing Diabetes	>= 6.5
Therapeutic goals for glycemic control	Age > 19 years Goal of therapy: < 7.0 Age < 19 years Goal of therapy: <7.5

**Note:**

- Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
- Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate

**Comments :**

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

HbA1c(%)	Mean Plasma Glucose (mg/dL)	HbA1c(%)	Mean Plasma Glucose (mg/dL)
6	126	12	298
8	183	14	355
10	240	16	413
