Test Report

Test Name	Results	Units	Bio. Ref. Interval
TOTAL T4 & TOTAL TSH			
T4, TOTAL, SERUM (ECLIA)	8.39	µg/dL	5.10 - 14.10

Note

- Total T3 & T4 levels measure the hormone which is in the bound form and is not available to most tissues.
- Severe systemic illness affects the thyroid binding proteins and can falsely alter Total T4 levels in the absence of a primary thyroid disease. Hence Free T3 & T4 levels are recommended for accurate assessment of thyroid dysfunction.

TSH, SERUM (ECLIA)	1.70	µIU/mL	0.27 - 4.20
--------------------	------	--------	-------------

Note

- TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
- Values <0.03 µIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
- Transient increase in TSH levels or abnormal TSH levels can be seen in various nonthyroidal diseases. Simultaneous measurement of TSH with free T4 is useful in evaluating the differential diagnosis
