Comments

1. Increased IPF values indicate increased peripheral destruction & low IPF values indicate decreased Bone Marrow production.
2. The clinical utility of IPF is in the Laboratory diagnosis of Thrombocytopenia due to increased peripheral Platelet destruction, particularly Autoimmune Thrombocytopenic Purpura (ATP) and Thrombotic Thrombocytopenic Purpura (TTP) Following patients during treatment the Platelet counts recovered the IPF% FELL.

3. IPF has a strong correlation with the recovery in Platelets counts in patients with Dengue. After a peak fall in IPF

Advised:

Urgent recheck of platelet count with a fresh L.J. sample in case the platelet count is not correlating clinically.

Test	Value	Biological Ref Interval	Unit
------	-------	-------------------------	------

REMARKS:

In vitro quantitative determination of HbA1c in whole blood is utilized in long term monitoring of a patient. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 8-12 weeks); and therefore provides much more reliable information for glycemia monitoring than determinations of blood glucose or urinary glucose.

It is recommended that the determination of HbA1c be performed at intervals of 3-6 months during diabetes mellitus therapy. Results of HbA1c should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

Estimated average glucose (eAG) - There is a predictable relationship between HbA1c and eAG. It helps people with diabetes to correlate their A1c to daily glucose monitoring levels. It reflects the average glucose levels in the past 2-3 months. The eAG calculation converts the A1c percentage to the units only used by physicians - mg/dl.

The patient exercised according to the BRUCE for 6:29 min:s, achieving a work level of Max. METS: 8.40. The resting heart rate of 96 bpm rose to a maximal heart rate of 164 bpm. This value represents 88 % of the maximal, age-predicted heart rate. The resting blood pressure of 136/86 mmHg, rose to a maximum blood pressure of 148/98 mmHg. The exercise test was stopped due to Target heart rate achieved.

Interpretation

Summary: Resting ECG: normal.
Functional Capacity: normal.
HR Response to Exercise: appropriate.
BP Response to Exercise: normal resting BP - appropriate response.
Chest Pain: none.
Arrhythmias: none.
ST Changes: none.
Overall impression: Normal stress test.

INVESTIGATION DONE: US ABDOMEN

LIVER: It is normal in size with homogeneous echotexture. Parenchymal echogenicity is increased. Contours are smooth & regular. No focal mass lesion is seen. IHBR are not dilated. Portal and Hepatic veins are normal in caliber. Sub diaphragmatic space is normal.

GALL BLADDER: It is normal in size, shape and outline. Its wall is normal in thickness. No stone / mass is seen in its lumen. Bile is anechoic. CBD is normal in caliber.

PANCREAS: are normal in size, shape and echotexture. MPD is not dilated.

RIGHT KIDNEY: It is normal in size, shape and position. Its contours are smooth and regular. Cortical thickness is normal. Cortical echogenicity is normal. Cortico-medullary differentiation is normal. PCS and ureter are not dilated. A stone of size 6.9mm is seen in lower pole calyx.

LEFT KIDNEY: It is normal in size in shape and position. Its contours are smooth and regular. Cortical thickness is normal. Cortical echogenicity is normal. Cortico-medullary differentiation is normal. PCS and ureter are not dilated. A stone of size 5.3mm is seen in lower pole calyx. Renal movements with respiration are normal in both sides.

SPLEEN: It is normal in size with homogenous echopattern. No focal mass lesion is seen. S.V is normal in caliber. No enlarged mesentric/ retroperitoneal lymphadenopathy are seen. Aorta and IVC are normal in caliber. No free fluid is seen in the abdominal cavity.

URINARY BLADDER: It is normal in size, shape and outline. Its wall is normal in thickness. No stone or mass is seen in its lumen.

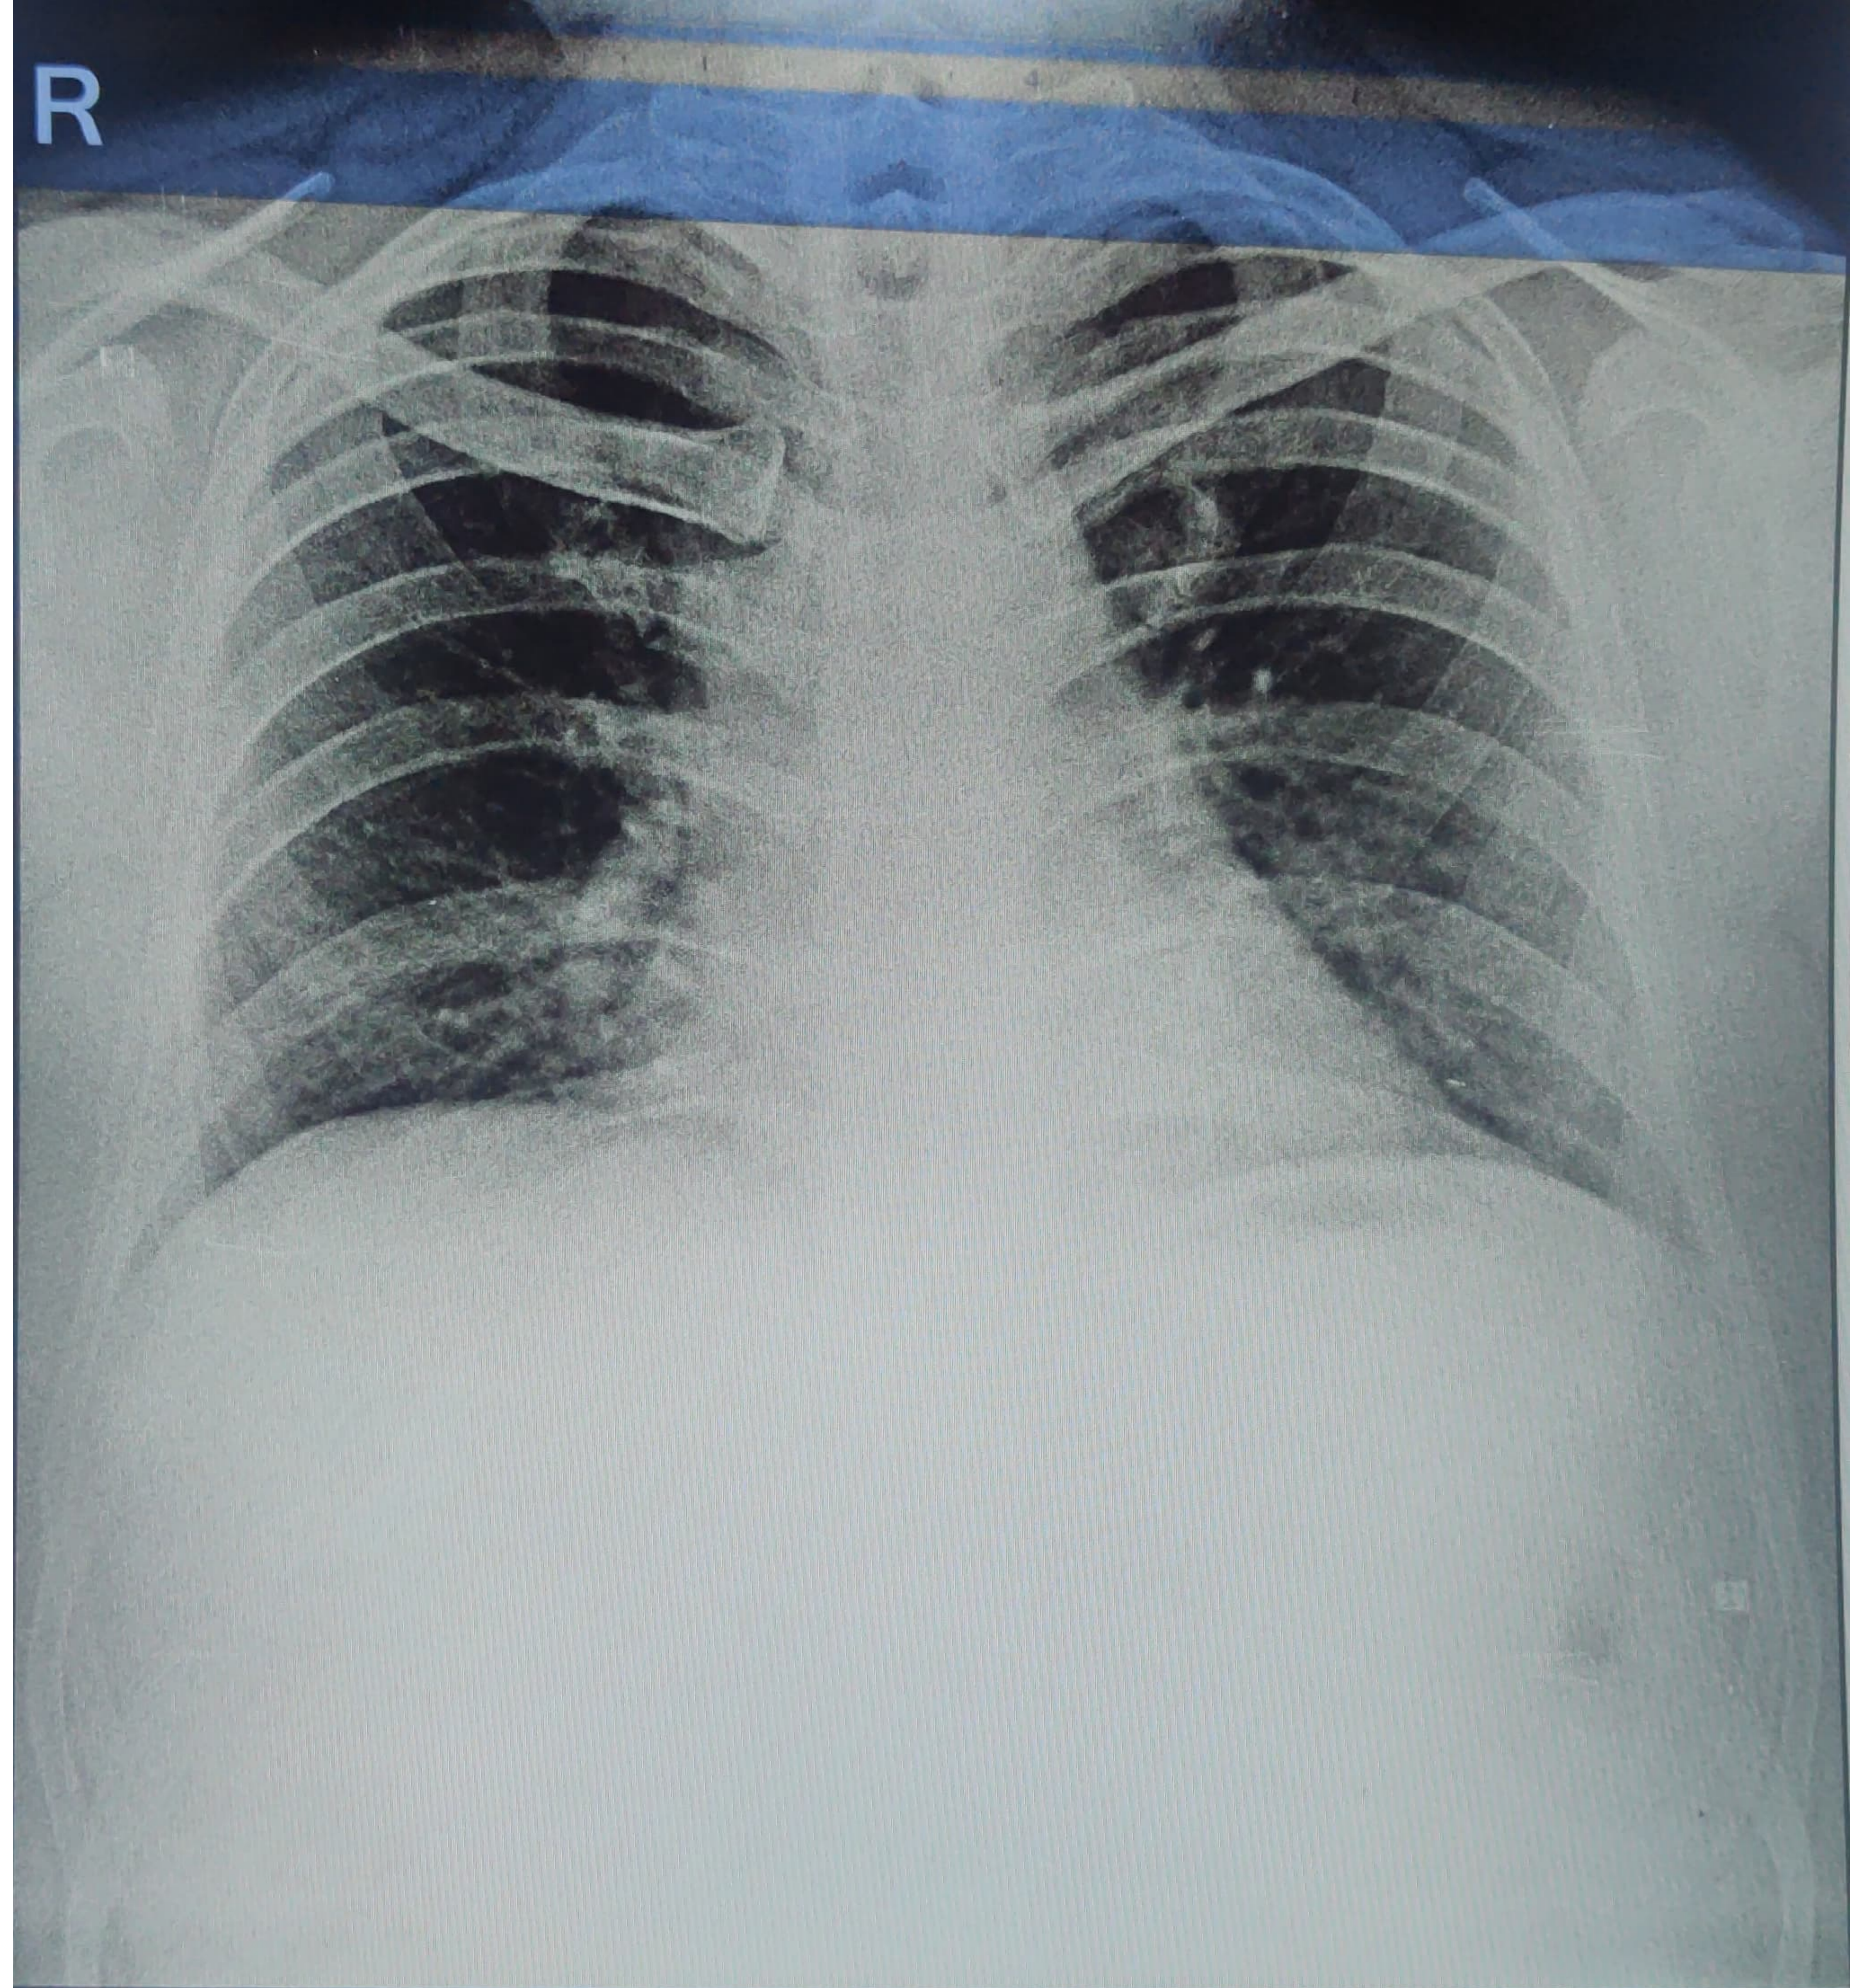

PROSTATE: It is normal in size. It echopattern is normal. Its capsule is intact.

IMPRESSION: GRADE I FATTY LIVER,
B/L RENAL STONES.
