Comments:
 Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic peptide, thyrotropin-releasing hormone (TRH), directly stimulates TSH production. TRH stimulates thyroid cell production and hyperthyroidism also stimulates the thyroid gland to synthesize and secrete T3 and T4. Quantitation of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamic) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

- TSH levels During Pregnancy:**
- First Trimester: 0.1 to 2.5 µIU/mL
 - Second Trimester: 0.2 to 3.0 µIU/mL
 - Third trimester: 0.3 to 3.0 µIU/mL
